

HARD | Simplify Commodities Strategy No K-1 ETF

FUND OVERVIEW

The **Simplify Commodities Strategy No K-1 ETF (HARD)** seeks long-term capital appreciation by systematically investing in commodity futures in an attempt to create commodity exposure that performs strongly during inflationary periods while still performing well in more typical market environments.

To this end, HARD deploys a suite of systematic long/short (l/s) models that have been designed by Altis Partners, a commodity trading advisor with over 20 years of experience.

PERFORMANCE REVIEW

After a quiet start to the quarter, HARD delivered attractive positive returns of 5.35%, outperforming the Bloomberg Commodity Total Return Index by 4.67%. This outperformance was driven by long positions in Gold and short positions in Heating Oil. Over the quarter, precious metals moved higher while Energy sold off. Long exposure to the Soybean complex was also additive in the back half of September.

The fund ran a positive roll yield on average through the quarter other than a modest position in Natural Gas where the curve is in steep contango. The average net notional long aggregate commodity position in HARD was approximately 70%, while the realized volatility of the fund remained contained at 11-12%.

During the quarter HARD expanded its universe of commodity contracts it can choose from, potentially supportive of both performance and increased diversification versus the benchmark.

Performance as of 09/30/24 | Inception Date: 03/27/23

	CUMULATIVE TOTAL RETURN				ANNUALIZED TOTAL RETURN	
	3 mo	6 mo	YTD	Since Inception	1 Year	Since Inception
NAV	5.35%	9.36%	10.68%	5.10%	2.54%	3.35%
Market Price	5.54%	9.32%	10.68%	5.10%	2.44%	3.35%
Bloomberg Commodity Total Return Index	0.68%	3.58%	5.86%	4.80%	0.96%	3.15%

The performance data quoted represents past performance and does not guarantee future results. Current performance may be lower or higher than the performance data quoted. In addition, investment returns and the principal value of an investment will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost. DEFINITIONS

Contango: The pattern of higher futures contract prices for longer expiration contracts.

Market Price: The current price at which shares are bought and sold. Market returns are based upon the last trade price.

NAV: The dollar value of a single share, based on the value of the underlying assets of the fund minus its liabilities, divided by the number of shares outstanding. Calculated at the end of each business day.

Notional Exposure: Positions weighted by the dollar value of underlying asset including leverage conveyed by option exposure

Rolling occurs when the Fund closes out of a Futures Contract as it nears its expiration and replaces it with a contract that has a later expiration.

SEC 30-Day Yield: The yield is calculated with a standardized formula and represents net investment income earned by a fund over a 30-day period, expressed as an annual percentage rate based on the fund's share price. The yield includes the effect of any fee waivers and/or reimbursements. Without waivers, yields would be reduced. This is also referred to as the "standardized yield", "30-Day Yield" and "Current Yield". The unsubsidized SEC 30-Day Yield does not reflect the effect of any fee waivers and/or expense reimbursements.

Volatility: A measure of how much and how quickly prices move over a given span of time.

IMPORTANT INFORMATION:

Investors should carefully consider the investment objectives, risks, charges, and expenses of Exchange Traded Funds (ETFs) before investing. To obtain an ETF's prospectus or Summary prospectus containing this and other important information, please call (855) 772-8488, or visit SimplifyETFs.com. Please read the prospectus carefully before you invest.

An investment in the fund involves risk, including possible loss of principal.

The fund is actively-managed and subject to the risk that the strategy may not produce the intended results. The fund will also rely on the Futures Adviser's judgments about the value and potential appreciation of particular securities which if assessed incorrectly could negatively affect the Fund.

The Fund's use of futures may involve different or greater risks than investing directly in securities and the contract may not correlate perfectly with the underlying asset. These risks include leverage risk which means a small percentage of assets invested in futures can have a disproportionately large impact on the Fund. This risk could cause the Fund to lose more than the principal amount invested. Futures contracts may become mispriced or improperly valued when compared to the adviser's expectation and may not produce the desired investment results. The Fund's exposure to futures contracts is subject to risks related to rolling. Extended periods of contango or backwardation can cause significant losses for the Fund. Any short sales of the futures contracts by the fund theoretically involves unlimited loss potential since the market price of securities sold short may continuously increase.

Short-term performance, in particular, is not a good indication of the fund's future performance, and an investment should not be made based solely on returns.

Investments linked to commodity or currency futures contracts including exposure to non-U.S. currencies can be highly volatile affected by market movements, changes in interest rates or factors affecting a particular industry or commodity. Changes in currency exchange rates can be unpredictable or change quickly which will affect the value of the Fund.

Repurchase Agreement Risk. The Fund's investment in repurchase agreements may be subject to market and credit risk with respect to the collateral securing the repurchase agreements.
