QUARTERLY FUND REVIEW 4Q24

AGGH | Simplify Aggregate Bond ETF

FUND OVERVIEW

The **Simplify Aggregate Bond ETF (AGGH)** seeks to maximize total return. The fund is actively managed to create a core bond exposure with enhanced yield via structural income opportunities such as more efficient option writing and curve positioning.

AGGH can be used by investors who not only seek higher yields than investment grade bonds normally provide, but a higher total return as well.

PERFORMANCE REVIEW

AGGH returned -3.40% in the quarter, underperforming the U.S. Aggregate Bond Index return (-3.06%) by 0.34%, as the 10-year Treasury rate moved higher from 3.78% to 4.57%. Our structural volatility selling strategy added +0.46% this quarter; however, Federal National Mortgage Association (FNMA) To Be Announced (TBA) positions detracted -1.76% over the quarter as mortgage rates moved higher. The outlook for rates is mixed, as the FED started an easing cycle by cutting 1.00%. However, the path forward appears to be a cautious, more gradual pace of interest rate cuts to bring down the Federal Funds Rate to a neutral level.

Longer-term treasury rates have come under pressure even with the FED easing rates due to strong economic data, sticky inflation, and uncertainty around fiscal policies of the new administration. Although this could lead to some volatility, it could also potentially keep rates range-bound. In such an environment, selling volatility through out-of-the-money options on fixed income instruments can potentially enhance the yield for AGGH.

Performance as of 12/31/24 | Inception Date: 02/14/22

	CUMULATIVE TOTAL RETURN				ANNUALIZED TOTAL RETURN	
	3 mo	**6 mo**	**YTD**	**Since Inception**	**1 Year**	**Since Inception**

DEFINITIONS

Expiry: The time until an option expires. In the context here expiry is used to describe the length of time from when an option position is initiated to when it will expire.

Duration: A measure of the sensitivity of the price of a bond or other debt instrument to a change in interest rates.

Investment Grade: Refers to the quality of a company's credit and must be rated at 'BBB' or higher by Standard and Poor's or Moody's. Credit quality does not refer to the fund itself.

Market Price: The current price at which shares are bought and sold. Market returns are based upon the last trade price.

NAV: The dollar value of a single share, based on the value of the underlying assets of the fund minus its liabilities, divided by the number of shares outstanding. Calculated at the end of each business day.

Option: An option is a contract that gives the buyer the right to either buy (in the case of a call option) or sell (in the case of a put option) an underlying asset at a pre-determined price ("strike") by a specific date ("expiry"). An "outright" is another name for a single option leg. A "spread" is when options are bought at one strike and an equal amount of options are sold at a different strike, all at the same expiry.

Out of the Money: An option has no intrinsic value, only extrinsic or time value.

SEC 30-Day Yield: The yield is calculated with a standardized formula and represents net investment income earned by a fund over a 30-day period, expressed as an annual percentage rate based on the fund's share price. The yield includes the effect of any fee waivers and/or reimbursements. Without waivers, yields would be reduced. This is also referred to as the "standardized yield", “30-Day Yield” and “Current Yield”. The unsubsidized SEC 30-Day Yield does not reflect the effect of any fee waivers and/or expense reimbursements.

Volatility: A measure of how much and how quickly prices move over a given span of time.

To-Be-Announced (TBA): A term that describes the forward-settling of mortgage-backed securities (MBS) trades.

IMPORTANT INFORMATION:

Investors should carefully consider the investment objectives, risks, charges and expenses of Exchange Traded Funds (ETFs) before investing. To obtain an ETF's prospectus or Summary prospectus containing this and other important information, please call (855) 772-8488 or view or download a prospectus online. Please read the prospectus carefully before you invest.

An investment in the fund involves risk, including possible loss of principal.

The fund is actively-managed is subject to the risk that the strategy may not produce the intended results.

The use of derivative instruments involves risks different from, or possibly greater than, the risks associated with investing directly in securities and other traditional investments. These risks include (i) the risk that the counterparty to a derivative transaction may not fulfill its contractual obligations; (ii) risk of mispricing or improper valuation; and (iii) the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, rate, or index. Derivative prices are highly volatile and may fluctuate substantially during a short period of time. The use of leverage by the Fund, such as borrowing money to purchase securities or the use of options, will cause the Fund to incur additional expenses and magnify the Fund’s gains or losses. The Fund's investment in fixed income securities is subject to credit risk (the debtor may default) and prepayment risk (an obligation paid early) which could cause its share price and total return to be reduced. Typically, as interest rates rise the value of bond prices will decline and the fund could lose value.

The Fund invests in ETFs (Exchange-Traded Funds) and is therefore subject to the same risks as the underlying securities in which the ETF invests as well as entails higher expenses than if invested into the underlying ETF directly.

While the option overlay is intended to improve the Fund’s performance, there is no guarantee that it will do so. Utilizing an option overlay strategy involves the risk that as the buyer of a put or call option, the Fund risks losing the entire premium invested in the option if the Fund does not exercise the option. Also, securities and options traded in over-the-counter markets may trade less frequently and in limited volumes and thus exhibit more volatility and liquidity risk.
