

QIS | Simplify Multi-QIS Alternative ETF

FUND OVERVIEW

The **Simplify Multi-QIS Alternative ETF (QIS)** seeks to provide positive absolute returns and income. The fund will invest in a diversified portfolio of third-party quantitative investment strategies (QIS) across equities, interest rates, commodities, currencies, and credit. Each systematic strategy is designed to capture proven market return premia.

By using a multi-strategy approach, Simplify seeks to identify the optimal allocation among 10-20 strategies to achieve positive returns and mitigate asset-class and single-strategy risks.

PERFORMANCE REVIEW

QIS had a negative absolute return of -0.24% for the quarter driven by absolute return (absolute return, commodity, rates, and foreign exchange alpha) and trend strategies. These detractors were somewhat offset by volatility carry strategies which contributed positively to return.

The Simplify QIS Team successfully completed the enhancement of the QIS ETF in mid-October, a significant milestone for the portfolio. The enhancement process involved substantial portfolio restructuring, with approximately 90% turnover of the QIS strategies at the start of the quarter. This transition incurred notable costs early in the quarter but was essential to align the portfolio with its long-term objectives.

Performance as of 12/31/24 | Inception Date: 07/10/23

	CUMULATIVE TOTAL RETURN				ANNUALIZED TOTAL RETURN	
	3 Mo	6 Mo	YTD	Since Inception	1 Year	Since Inception

DEFINITIONS

Alpha: An investment strategy's ability to beat the market, or its "edge." Alpha is thus also often referred to as "excess return" or the "abnormal rate of return" in relation to a benchmark, when adjusted for risk.

Carry Trade: A carry trade involves borrowing at a low interest rate and investing in an asset that provides a higher rate of return.

Foreign Exchange (FX): The global marketplace for the trading of one nation's currency for another.

ICE BofA US 3-Month Treasury Bill Index: An unmanaged index that is comprised of a single U.S. Treasury issue with approximately three months to final maturity, purchased at the beginning of each month and held for one full month.

Market Price: The current price at which shares are bought and sold. Market returns are based upon the last trade price.

NAV: The dollar value of a single share, based on the value of the underlying assets of the fund minus its liabilities, divided by the number of shares outstanding. Calculated at the end of each business day.

Options: An option is a contract that gives the buyer the right to either buy (in the case of a call option) or sell (in the case of a put option) an underlying asset at a pre-determined price ("strike") by a specific date ("expiry"). An "outright" is another name for a single option leg. A "spread" is when options are bought at one strike and an equal amount of options are sold at a different strike, all at the same expiry.

SEC 30-Day Yield: The yield is calculated with a standardized formula and represents net investment income earned by a fund over a 30-day period, expressed as an annual percentage rate based on the fund's share price. The yield includes the effect of any fee waivers and/or reimbursements. Without waivers, yields would be reduced. This is also referred to as the "standardized yield", "30-Day Yield" and "Current Yield". The unsubsidized SEC 30-Day Yield does not reflect the effect of any fee waivers and/or expense reimbursements.

VIX Index: A real-time market index representing the market's expectations for volatility over the coming 30 days.

Volatility: A measure of how much and how quickly prices move over a given span of time.

IMPORTANT INFORMATION:

Investors should carefully consider the investment objectives, risks, charges and expenses of Exchange Traded Funds (ETFs) before investing. To obtain an ETF's prospectus or Summary prospectus containing this and other important information, please call (855) 772-8488 or view or download a prospectus online. Please read the prospectus carefully before you invest.

An investment in the fund involves risk, including possible loss of principal.

The fund is actively-managed is subject to the risk that the strategy may not produce the intended results. The fund is new and has a limited operating history to evaluate.

The use of derivative instruments involves risks different from, or possibly greater than, the risks associated with investing directly in securities and other traditional investments. These risks include (i) the risk that the counterparty to a derivative transaction may not fulfill its contractual obligations; (ii) risk of mispricing or improper valuation; and (iii) the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, rate, or index. Derivative prices are highly volatile and may fluctuate substantially during a short period of time. The use of leverage by the Fund, such as borrowing money to purchase securities or the use of options, will cause the Fund to incur additional expenses and magnify the Fund's gains or losses. The Fund's investment in fixed income securities is subject to credit risk (the debtor may default) and prepayment risk (an obligation paid early) which could cause its share price and total return to be reduced. Typically, as interest rates rise the value of bond prices will decline and the fund could lose value.

The Fund invests in ETFs (Exchange-Traded Funds) and is therefore subject to the same risks as the underlying securities in which the ETF invests as well as entails higher expenses than if invested into the underlying ETF directly.

While the option overlay is intended to improve the Fund's performance, there is no guarantee that it will do so. Utilizing an option overlay strategy involves the risk that as the buyer of a put or call option, the Fund risks losing the entire premium invested in the option if the Fund does not exercise the option. Also, securities and options traded in over-the-counter markets may trade less frequently and in limited volumes and thus exhibit more volatility and liquidity risk.
