

NXTV | Simplify NEXT Intangible Value Index ETF

Overview

The Simplify NEXT Intangible Value Index ETF (NXTV) seeks to provide investment results that track, before fees and expenses, the performance of the NEXT Intangible Value Index.

The Index will select companies with low equity valuations relative to their intangible-adjusted book values within their respective sectors.

The research behind the development of the index supports the idea that companies with low intangible-adjusted book valuations outperform traditional valuation metrics over time.

Key Points

- Traditional valuation metrics, based primarily on price-to-book value, have dramatically underperformed the overall stock market for decades
- Reliance on book value as a metric underweights many successful companies that invest in research & development, productivity and human capital
- Investment thesis is backed by a substantial body of academic research

What is Intangible Capital?

- Intangibles are productive assets that lack physical form and are not included on a corporate balance sheet, e.g. patents, software, research & development, customer lists, and firm-specific human capital.
- The index calculates intangible capital by measuring and capitalizing corporate "selling, general and administrative" expenses.

Why Intangible Capital Is Important

- Tangible capital has represented a declining portion of equity market valuations over time.
- We believe the most successful corporations have exhibited relatively "asset-light" characteristics with much higher allocations to intangible capital.

Strategy Details

- Index construction begins with a potential investment universe of the top 2,000 U.S. corporations based on market capitalization.
- A ratio of market capitalization to intangible-adjusted book value is calculated for each stock and compared to other stocks in its sector. The 200 stocks with the lowest ratios are selected, weighting stocks with the lowest ratios more heavily.
- A maximum of 5% will be invested in a single stock at time of purchase, with a 5-stock minimum per sector.
- The index is reconstituted and rebalanced quarterly.

DEFINITIONS:

Intangible-Adjusted Book Value: The index calculates intangible capital by measuring and capitalizing corporate expenses related to growing intangible assets.

Market Price: The current price at which shares are bought and sold. Market returns are based upon the last trade price.

NAV: The dollar value of a single share, based on the value of the underlying assets of the fund minus its liabilities, divided by the number of shares outstanding. Calculated at the end of each business day.

NEXT Intangible Value Index: The index begins with the top 2,000 stocks from the Solactive US 3000 Index. From this list the index selects the 200 stocks with the lowest equity valuations relative to their intangiblesadjusted book values within their respective sectors. Minimum number of securities per sector is 5, with a maximum individual weight capped at 5%. Stocks will be re-ranked and the index rebalanced quarterly.

Price-to-Book Value: The ratio of the market value of a company's shares (share price) over its book value of equity.

SEC 30-Day Yield: The yield is calculated with a standardized formula and represents net investment income earned by a fund over a 30-day period, expressed as an annual percentage rate based on the fund's share price. The yield includes the effect of any fee waivers and/or reimbursements. Without waivers, yields would be reduced. This is also referred to as the "standardized yield", "30-Day Yield" and "Current Yield". The unsubsidized SEC 30-Day Yield does not reflect the effect of any fee waivers and/or expense reimbursements.

Investors should carefully consider the investment objectives, risks, charges, and expenses of Exchange Traded Funds (ETFs) before investing. To obtain an ETF's prospectus containing this and other important information, please call (855) 772-8488, or visit SimplifyETFs.com. Please read the prospectus carefully before you invest.

An investment in the fund involves risk, including possible loss of principal.

The fund is subject to the risk that the strategy may not produce the intended results. The fund is new and has a limited operating history to evaluate.

Concentration Risk: The Fund may focus its investments in securities of a particular industry or group of industries.

Small and Medium Capitalization Risk: The earnings and prospects of small and medium-sized companies are more volatile than larger companies and may experience higher failure rates than larger companies.

Value Risk: A company may be undervalued due to market or economic conditions, temporary earnings declines, unfavorable developments affecting the company, and other factors.

Tracking Error Risk: Tracking error is the divergence of the Fund's performance from that of the Index.
