FUND SUMMARY – SIMPLIFY BITCOIN STRATEGY PLUS INCOME ETF

Investment Objective: The Simplify Bitcoin Strategy PLUS Income ETF (the “Fund” or “MAXI”) seeks income and capital appreciation.

Fees and Expenses of the Fund: This table describes the fees and expenses that you may pay if you buy, sell, and hold shares of the Fund. **You may pay other fees, such as brokerage commissions and other fees to financial intermediaries on the purchase and sale of Fund shares, which are not reflected in the tables and examples below.**

Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment)	
Management Fees	0.85%
Distribution and Service (12b-1) Fees	0.00%
Other Expenses ⁽¹⁾	5.24%
Acquired Fund Fees and Expenses ⁽²⁾	0.01%
Total Annual Fund Operating Expenses	6.10%

(1) Other Expenses includes interest expenses of 5.24%.

(2) Acquired Fund Fees and Expenses are the indirect costs of investing in other investment companies. The operating expenses in this fee table do not correlate to the expense ratio in the Fund’s financial highlights because the financial statements include only the direct operating expenses incurred by the Fund.

Example: This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds.

The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then redeem all of your shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund’s operating expenses remain the same. Although your actual costs may be higher or lower, based upon these assumptions your costs would be:

1 Year	3 Years	5 Years	10 Years
\$606	\$1,800	\$2,967	\$5,775

Portfolio Turnover: The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Fund shares are held in a taxable account. These costs, which are not reflected in annual fund operating expenses or in the Example, affect the Fund’s performance. During the most recent fiscal year, the Fund’s portfolio turnover rate was 0% of the average value of its portfolio.

Principal Investment Strategies: The Fund is an actively managed exchange-traded fund (an “ETF”). The Fund’s Adviser seeks to achieve the Fund’s investment objective by using three strategies: (1) a Bitcoin strategy, (2) an income strategy, and (3) an option overlay strategy.

The Fund does not invest in Bitcoin directly.

Bitcoin Strategy

The Adviser seeks capital gains through a Bitcoin strategy. Under normal market conditions, the Adviser selects investments in Bitcoin related instruments so that the total value of economic Bitcoin exposure is approximately 50% to 200% of the net assets of the Fund. The Adviser uses a proprietary economic model to establish Bitcoin exposure along the 50% to 200% continuum. The proprietary model uses historical data to identify price and volatility trends and then predict current market behavior. The Adviser increases or decreases Bitcoin exposure based on the direction of the trends. The Bitcoin related instruments in which the Fund invests are Bitcoin futures, exchange-traded products with direct exposure to Bitcoin (“Bitcoin ETPs”), exchange-traded funds with indirect exposure to Bitcoin primarily through Bitcoin futures, options, or other derivative instruments (“Bitcoin ETFs”), and options and swaps linked to Bitcoin ETFs and Bitcoin ETPs as well as swaps and options on Bitcoin. The Adviser selects the instrument or instruments it believes presents the most economically efficient means to capture Bitcoin returns. The Adviser may reallocate among instruments when one becomes more economically efficient.

Bitcoin Futures and Swaps

Bitcoin futures are intended to track, although not lockstep, the price of Bitcoin. The Fund only invests in standardized, cash-settled Bitcoin futures contracts traded on commodity exchanges registered with the Commodity Futures Trading Commission. As of the date of this prospectus, only regulated U.S. exchanges have such contracts. The value of Bitcoin futures is determined by reference to the underlying reference asset (the spot price of Bitcoin as measured by the relevant futures exchange, which is based on a survey of major spot Bitcoin exchanges). The Adviser invests primarily in front-month Bitcoin futures. Front-month Bitcoin futures contracts are those contracts with the shortest time to maturity.

The Fund may also gain exposure to Bitcoin by entering into swap agreements that use Bitcoin, a Bitcoin ETF or Bitcoin ETP as the reference asset. A swap agreement is a two-party contract entered into primarily by institutional investors for periods ranging from a day to more than one year. In a standard “swap” transaction, two parties agree to exchange the returns (or differentials in rates of return) earned or realized on particular predetermined investments or instruments. The swap agreements entered into by the Fund may provide exposure to a single Bitcoin ETF and/or Bitcoin ETP, multiple Bitcoin ETPs and/or Bitcoin ETFs, or solely to Bitcoin. The particular Bitcoin ETF or Bitcoin ETP used as the reference asset for one or more of the Fund’s swap agreements may change at any time based on a variety of factors, including market conditions, counterparty terms, and the liquidity, performance, and fees of those Bitcoin ETFs and Bitcoin ETPs.

Bitcoin ETPs and Bitcoin ETFs

Bitcoin ETPs are investment vehicles that track the price of Bitcoin by directly holding actual Bitcoin (called “spot”) as their underlying asset while Bitcoin ETFs primarily invest in Bitcoin futures, options, swaps, or other derivative instruments to gain exposure to Bitcoin. The Bitcoin ETPs and Bitcoin ETFs trade on a U.S.-regulated securities exchange. Unlike Bitcoin ETFs, Bitcoin ETPs are not registered as investment companies under the Investment Company Act of 1940, as amended (the “1940 Act”). The Adviser selects specific Bitcoin ETPs and Bitcoin ETFs that it believes offer sufficient liquidity and relatively low expenses.

Options on Bitcoin, Bitcoin Futures, Bitcoin ETFs and Bitcoin ETPs

In effectuating the Fund’s Bitcoin strategy, the Fund may purchase call options contracts that utilize Bitcoin, Bitcoin futures, a Bitcoin ETF or Bitcoin ETP as the reference asset. To implement the Bitcoin options strategy, the Fund invests in over-the-counter options on Bitcoin and traditional exchange-traded options on Bitcoin futures, Bitcoin ETFs, Bitcoin ETPs, or an index of Bitcoin ETPs and/or FLEXible EXchange® options (“FLEX Options”) that utilize a Bitcoin ETF or Bitcoin ETP as the reference asset. The Fund will close out over-the-counter options on Bitcoin prior to expiration so that it does not take delivery of Bitcoin. The Fund expects to primarily invest in options contracts that are listed, traded and cleared on regulated U.S. exchanges. Traditional exchange-traded options have standardized terms, such as the type (call or put), the reference asset, the strike price and expiration date. Exchange-listed options contracts are guaranteed for settlement by the Options Clearing Corporation (“OCC”). FLEX Options are a type of exchange-listed options contract with uniquely customizable terms that allow investors to customize key terms like type, strike price and expiration date that are standardized in a typical options contract. FLEX Options are also guaranteed for settlement by the OCC.

The Fund is deemed to be concentrated because it invests more than 25% of its net assets in investments that provide exposure to Bitcoin and/or Bitcoin futures contracts.

Bitcoin and Bitcoin Blockchain

Bitcoin is a digital asset that operates on a decentralized network using blockchain technology to facilitate secure and anonymous transactions. Bitcoin represents a digital asset that functions as a medium of exchange (although it is not widely used in this manner at present) utilizing cryptographic protocols to secure transactional processes, control the creation of additional units, and verify the transfer of assets. Its operation on a decentralized blockchain network ensures both transparency and immutability of records, without the need for a central authority. This innovative technology underpinning Bitcoin allows for peer-to-peer transactions and provides a framework for digital scarcity.

The Bitcoin blockchain constitutes a decentralized, digital ledger technology that chronologically and publicly records all Bitcoin transactions. This technology is characterized by its use of blocks, which are structurally linked in a chain through cryptographic hashes. Each block contains a list of transactions that, once verified and added to the blockchain through a consensus process known as proof of work, become extremely difficult to reverse and tamper with. The integrity, transparency, and security of the transactional data are maintained autonomously within the Bitcoin network, eliminating the necessity for central oversight and facilitating trust in a peer-to-peer system.

Income Strategy

The Adviser seeks to generate income through an income strategy focused on high-quality short-term debt instruments: U.S. Treasury securities, U.S. Treasury Inflation-Protected Securities (“TIPS”), and fixed-income ETFs that invest primarily in U.S. Treasury securities. A portion of these securities serve as collateral for the Fund’s futures, options, and swap positions.

Additionally, the Fund increases its income producing portfolio through leverage by entering into reverse repurchase agreements. Reverse repurchase agreements are contracts in which the Fund is a seller of securities under an agreement to buy the securities back at a specified time and price. Reverse repurchase agreements are used by the Fund as an indirect means of borrowing.

Option Overlay Strategy

The Adviser seeks additional capital gains through an option overlay strategy with up to 20% of Fund assets. However, gains from written option premiums are often referred to as income. The option overlay strategy consists of an exchange-traded and over-the-counter (“OTC”) put and call option spread writing strategy on instruments linked to equities, fixed income, volatility indices, commodities, currencies, and Bitcoin). The equity and fixed income strategies include primarily U.S. companies but may include companies from both emerging and developed foreign markets and may include companies of any market capitalization. The commodity strategies may include all types of commodities and commodity indexes. Currency strategies are those that attempt to profit from the changes in the relative value of various currencies. Volatility strategies are those that attempt to profit from the changes in the historical or implied return volatility of futures or securities indexes. Volatility is a measure of a reference asset’s historical or expected future price movements. The Bitcoin related options in which the Fund may invest include exchange traded options on Bitcoin, Bitcoin futures, Bitcoin ETFs, Bitcoin ETPs, or an index of Bitcoin ETPs.

A call option gives the owner the right, but not the obligation, to buy a security, index future, ETF, or reference asset at a specified price (strike price) within a specific time period. A put option gives the owner the right, but not the obligation, to sell index futures or sell a security, index future, ETF, or reference asset at a specified price (strike price) within a specific time period.

Put Spread Sub-Strategy

In a put option spread, the Fund sells (writes) an at-the-money or out of the money (below current market price) put option while also purchasing a further out of the money put option. The written put option is intended to generate income, and the purchased put option is intended to partially limit the Fund’s potential losses from the written put option. The Adviser selects written put options that it believes will expire worthless or are likely to decline in value.

Call Spread Sub-Strategy

In a call option spread, the Fund sells (writes) an at-the-money or out of the money (above current market price) call option while also purchasing a further out of the money call option. The purchased call option is intended to limit the Fund’s potential losses from the written call option. The Adviser selects written call options that it believes will expire worthless or are likely to decline in value.

Generally, the Adviser selects among the options linked strategies based upon its evaluation of relative value based on cost, strike price (price that the optioned asset can be bought or sold by the option holder) and maturity (the last date the option contract is valid) and will exercise or close the options based on approaching maturity or opportunistic portfolio rebalancing. The Fund anticipates purchasing and selling options on a weekly, monthly, quarterly, and annual basis, depending upon the Fund's rebalancing requirements and the individual option expiration dates. However, the Fund may rebalance its option portfolio on a more frequent basis for a number of reasons such as if market volatility renders the protection provided by the option strategy less effective or ineffective or an option position has appreciated to the point that it is prudent to decrease the Fund's exposure and realize gains for the Fund's shareholders. While the option overlay is intended to improve the Fund's performance, there is no guarantee that it will do so.

Subsidiary

The Fund executes a portion of its Bitcoin strategy indirectly by investing up to 25% of its total assets (measured at the time of investment) in a wholly owned and controlled subsidiary, the Simplify Bitcoin Strategy PLUS Income Cayman Fund (the "Subsidiary"), which is designed to enhance the ability of the Fund to obtain indirect exposure to the Bitcoin market consistent with the limits of the U.S. federal tax law requirements applicable to registered investment companies. The Fund expects to gain exposure to Bitcoin futures, Bitcoin swaps, Bitcoin ETP swaps, options on Bitcoin, Bitcoin futures, Bitcoin ETPs, an index of Bitcoin ETPs, volatility indices, and commodities through the Subsidiary. The Fund does not control any other entity. The Subsidiary is advised by the Adviser. Unlike the Fund, the Subsidiary may invest without limitation indirectly in Bitcoin-related investments, however, the Subsidiary will comply with the same Investment Company Act of 1940 asset coverage requirements, when viewed on a consolidated basis with the Fund, with respect to its investments in derivatives; and also complies with the provisions of the Investment Company Act of 1940 in Section 15 (regarding investment advisory contract approvals).

The Fund is classified as a "non-diversified" investment company under the 1940 Act, which means that the Fund may invest a higher percentage of its assets in a fewer number of issuers than is permissible for a "diversified" fund.

Principal Investment Risks: *As with all funds, there is the risk that you could lose money through your investment in the Fund. Many factors affect the Fund's NAV and price of shares and performance.*

The following describes the principal risks the Fund bears with respect to its investments. As with any fund, there is no guarantee that the Fund will achieve its goal.

Bitcoin Risk. The value of the Fund's investments in Bitcoin related instruments are subject to fluctuations in the value of Bitcoin. Bitcoin is a relatively new innovation and the market for Bitcoin is subject to rapid price swings, changes and uncertainty. The further development of the Bitcoin network and the acceptance and use of Bitcoin are subject to a variety of factors that are difficult to evaluate. The value of Bitcoin has been, and may continue to be, substantially dependent on speculation, such that trading and investing in these assets generally may not be based on fundamental analysis. The slowing, stopping or reversing of the development of the Bitcoin network or the acceptance of Bitcoin may adversely affect the price of Bitcoin. Bitcoin is subject to the risk of fraud, theft, manipulation or security failures, operational or other problems that impact the digital asset trading venues on which Bitcoin trades. The Bitcoin blockchain may contain flaws that can be exploited by hackers. A significant portion of Bitcoin is held by a small number of holders sometimes referred to as "whales." Transactions of these holders may influence the price of Bitcoin.

Unlike the exchanges for more traditional assets, such as equity securities, Bitcoin and the digital asset trading venues on which it trades are largely unregulated and highly fragmented and digital asset trading venues may be operating out of compliance with regulations. As a result of the lack of regulation, individuals or groups may engage in fraud or market manipulation (including using social media to promote Bitcoin in a way that artificially increases the price of Bitcoin). Investors may be more exposed to the risk of theft, fraud and market manipulation than when investing in more traditional asset classes. Over the past several years, a number of digital asset trading venues have been closed due to fraud, failure or security breaches. Investors in Bitcoin may have little or no recourse should such theft,

fraud or manipulation occur and could suffer significant losses. Legal or regulatory changes may negatively impact the operation of the Bitcoin network or restrict the use of Bitcoin. The Bitcoin related instruments may also be negatively impacted by regulatory enforcement actions against the digital asset trading venues upon which Bitcoin trades. Such actions could significantly reduce the number of venues upon which Bitcoin trades and could negatively impact the Bitcoin held by the Bitcoin ETPs and the Bitcoin-linked derivatives. In addition, digital asset trading venues, Bitcoin miners, and other participants may have significant exposure to other digital assets. Instability in the price, availability or legal or regulatory status of those instruments may adversely impact the operation of the digital asset trading venues and the Bitcoin network. The realization of any of these risks could result in a decline in the acceptance of Bitcoin and consequently a reduction in the value of Bitcoin, Bitcoin-linked derivatives, and shares of the Bitcoin ETPs and Bitcoin ETFs. Such occurrences could also impair the Bitcoin ETPs' and Bitcoin ETFs' ability to meet their investment objective pursuant to their respective investment strategy.

The Bitcoin network is maintained and secured by a group of validators who “mine” Bitcoin, which involves contributing computer power to the network to validate transactions, maintain security and finalize settlement. The Bitcoin blockchain relies on a consensus mechanism whereby miners agree on the accurate state of the database. If a malicious actor (or group of actors) were to gain control of more than 50% the mining (or “hash”) power in the network, even temporarily, they would have the ability to block new transactions from being confirmed and could, over time, reverse or reorder prior transactions. Although it may be challenging for a malicious actor (or group of actors) to gain control of 50% of the mining (or “hash”) power in the Bitcoin blockchain, such an attack would significantly impact the value of Bitcoin, and thereby of the Bitcoin held by the Bitcoin ETPs, the Bitcoin futures contracts held by the Bitcoin ETF, and Bitcoin-linked derivatives.

A blockchain is a public database that is updated, shared and maintained across many computers in a network. The software that powers a blockchain is known as its protocol. Like all software, these protocols may update or change from time-to-time. In the case of the Bitcoin protocol, updates are made based on proposals submitted by developers, but only if a majority of the users and miners adopt the new proposals and update their individual copies of the protocol. Certain upgrade proposals to a blockchain may not be accepted by all the participants in an ecosystem. If one significant group adopts a proposed upgrade and another does not – or if groups adopt different upgrades – this can result in a “fork” of the blockchain, wherein two distinct sets of users and validators or users and miners run two different versions of a protocol. If the versions are sufficiently different such that the two versions of the protocol cannot simultaneously maintain and update a shared record of the blockchain database, it is called a “hard fork.” A hard fork can result in the creation of two competing blockchains, each with its own native crypto assets. For instance, on August 1, 2017, two factions in the Bitcoin community could not agree on whether or not to adopt an upgrade to the Bitcoin protocol related to how to scale throughput on the blockchain. The disagreement created a fork, with the smaller group taking the name “Bitcoin Cash” and running its own blockchain and related native crypto asset. The larger group retained the name Bitcoin for its blockchain and held Bitcoin as the native crypto asset. Additional forks of the Bitcoin blockchain are possible. A large-scale fork could introduce risk, uncertainty, or confusion into the Bitcoin blockchain, or could fraction the value of the main blockchain and its native crypto asset, which could significantly impact the value of Bitcoin held by the Bitcoin ETPs, Bitcoin futures contracts held by the Bitcoin ETFs, and Bitcoin-linked derivatives held by the Fund. Additionally, a hack of the Bitcoin blockchain or one or more projects that interact with or that are built on top of the Bitcoin blockchain could negatively impact the price of Bitcoin, whether it leads to another hard fork or not, and thereby the value of the Bitcoin held by the Bitcoin ETPs, the Bitcoin futures contracts held by the Bitcoin ETFs, and Bitcoin-linked derivatives held by the Fund.

The Bitcoin blockchain and its native crypto asset, Bitcoin, face numerous challenges to gaining widespread adoption as an alternative payments system, including the slowness of transaction processing and finality, variability in transaction fees and volatility in Bitcoin's price. It is not clear that the Bitcoin blockchain or Bitcoin can overcome these and other impediments, which could harm the long-term adoption of the Bitcoin blockchain and Bitcoin as an alternative payment system, and thereby negatively impact the price of Bitcoin. In addition, alternative public blockchains have been developed and may in the future develop that compete with the Bitcoin blockchain and may have significant advantages as alternative payment systems, including higher throughput, lower fees, faster settlement and finalization, and the ability to facilitate untraceable and/or privacy-shielded transactions through the use of zero-knowledge cryptography or other means. It is possible that these alternative public blockchains and their native crypto assets may be more successful than the Bitcoin blockchain and Bitcoin in gaining adoption as an alternative payments system, which could limit the long-term adoption of the Bitcoin blockchain and Bitcoin, thereby negatively impact the price of Bitcoin. Such alternative public blockchains, such as the Ethereum network, allow users to write and implement smart contracts—that is, general-purpose code that executes on every computer in the network and can instruct the transmission of information and value based on a sophisticated set of logical conditions. Using smart contracts, users can create markets,

store registries of debts or promises, represent the ownership of property, move funds in accordance with conditional instructions and create other digital assets. Furthermore, traditional payment systems may improve their own technical capabilities and offer faster settlement times, faster finalization and lower fees. This could make it more difficult for the Bitcoin blockchain and Bitcoin to gain traction as an alternative payments system, which could limit the long-term adoption of the Bitcoin blockchain and Bitcoin, and thereby negatively impact the price of Bitcoin. Finally, one means by which the ecosystem surrounding the Bitcoin blockchain has attempted to mitigate concerns about the slowness of transaction processing and finality and the variability of transaction fees has been through the development of so-called Layer 2 networks, including the “Lightning Network.” Layer 2 networks are separate blockchains built on top of “Layer 1” blockchains like the Bitcoin blockchain for the purpose of augmenting the throughput of the Layer 1 blockchain, and often, providing lower fees for transaction processing and faster settlement. Layer 2 blockchains introduce certain risks into the Bitcoin ecosystem that should be considered. For instance, Layer 2 blockchains are a relatively new and still developing technology. Technological issues – including hacks, bugs, or failures – could introduce risk or harm confidence in the Bitcoin ecosystem, which could negatively impact the price of Bitcoin. In addition, users may choose to settle an increasing share of transactions on Layer 2 blockchains, which could negatively impact the transaction activity on, and the amount of fee revenue generated by, the Bitcoin blockchain itself, which could negatively impact the price of Bitcoin. If these or other developments negatively impact the price of Bitcoin, this would negatively impact the value of the Bitcoin ETPs, Bitcoin ETFs and Bitcoin-linked derivatives held by the Fund.

The realization of any of these risks could result in a decline in the acceptance of Bitcoin and consequently a reduction in the value of Bitcoin, Bitcoin futures, Bitcoin-linked derivatives, and the Fund.

- *Bitcoin Tax Risk.* By investing in Bitcoin futures indirectly through the Subsidiary, the Fund will obtain exposure to the crypto asset Bitcoin within the federal tax requirements that apply to the Fund. However, because the Subsidiary is a controlled foreign corporation, any income received by the Fund from its investments in the Subsidiary will be passed through to the Fund as ordinary income, which may be taxed at less favorable rates than capital gains.

The Fund’s investments in Bitcoin ETPs or similar investment vehicles are grantor trusts for U.S. federal income tax purposes, and therefore an investment by the Fund directly in such an investment will generally be treated as a direct investment in Bitcoin for such purposes. In order to qualify for the special tax treatment accorded a regulated investment company (“RIC”) and its shareholders, Subchapter M of the Internal Revenue Code of 1986, as amended (the “Code”) requires, among other things, that at least 90% of the Fund’s income be “qualifying income.” Although the income from Bitcoin ETPs in which the Fund invests is not treated as qualifying income, the Fund avoids the recognition of any income from Bitcoin ETPs by handling any Bitcoin ETP transactions with Authorized Participants (“AP”) through in-kind creations and redemptions. For example, if the Fund wants to reduce its exposure to Bitcoin ETPs, it may deliver a basket of the Bitcoin ETPs to the AP in exchange for shares of the Fund. The Bitcoin ETPs are not sold by the Fund and therefore, no income is generated for the Fund. To the extent the IRS disagrees with the Fund’s view regarding the use of the in-kind creation and redemptions to avoid recognition of non-qualifying income from Bitcoin ETPs, then the Fund may fail to qualify as a RIC under the Code. If, in any year, the Fund fails to qualify as a RIC and was ineligible to or was not able to cure such failure, the Fund would be taxed in the same manner as an ordinary corporation and subject to U.S. federal income tax on all its income at the fund level. The resulting taxes could substantially reduce the Fund’s net assets and the amount of income available for distribution. In addition, in order to requalify for taxation as a RIC, the Fund could be required to recognize unrealized gains, pay substantial taxes and interest, and make certain distributions. See “Authorized Participant Risk” below for additional risks regarding APs.

- *Bitcoin Futures Contract Risk.* The market for Bitcoin futures may be less developed, and potentially less liquid and more volatile, than more established futures markets as Bitcoin futures are relatively new. The successful use of futures contracts draws upon the adviser’s skill and experience with respect to such instruments and are subject to special risk considerations. The primary risks associated with the use of futures contracts are (a) the imperfect correlation between the change in market value of the reference asset and the price of the futures contract; (b) possible lack of a liquid secondary market and the resulting inability to close a futures contract when desired; (c) investments in futures contracts involves leverage, which means a small percentage of assets in futures can have a disproportionately large impact on the Fund and the Fund can lose more than the principal amount invested; (d) losses caused by unanticipated market movements, which are potentially unlimited; (e) if the Fund has insufficient cash, it may have to sell securities from its portfolio to meet daily variation margin requirements, and the Fund may have to sell securities at a time when it may be disadvantageous to do so. Bitcoin futures may trade at a price premium above Bitcoin. As a futures contract approaches expiration, the price premium will tend to erode, which will result in losses to the Fund assuming other things equal.

Options Risk. Buying and selling (writing) options are speculative activities and entail greater than ordinary investment risks. Options enable the Fund to purchase exposure that is significantly greater than the premium paid. Consequently, the value of such options can be volatile, and a small investment in options can have a large impact on the performance of the Fund. The Fund risks losing all or part of the cash paid (premiums) for purchasing options. Even a small decline in the value of a reference asset underlying call options or a small increase in the value of a reference asset underlying put options can result in the entire investment in such options being lost. The Fund's options also may fail to track the performance of their underlying reference asset, which may limit the effectiveness of the Fund's strategy. The potential loss from written options can exceed the Fund's initial investment in such options and could be unlimited. As a seller (writer) of a put option, the Fund will tend to lose money if the value of the reference index or security falls below the strike price. As the seller (writer) of a call option, the Fund will tend to lose money if the value of the reference index or security rises above the strike price. As the buyer of a put or call option, the Fund risks losing the entire premium invested in the option if the Fund does not exercise the option. Additionally, option spreads expose the Fund to potential losses of the amount between the strike price of the written option and the purchased option.

Active Management Risk. The Fund is subject to the risk that the investment management strategy may not produce the intended results and may negatively impact Fund performance.

Bitcoin ETF Risks. **The Bitcoin ETFs do not invest directly in Bitcoin.** Instead, the Bitcoin ETFs obtain indirect exposure to Bitcoin by investing in Bitcoin futures, swaps, and/or options. The market for derivatives linked to Bitcoin may be less developed, and potentially less liquid and more volatile, than more established markets. While these markets have grown substantially since Bitcoin derivatives commenced trading, there can be no assurance that this growth will continue. The price for Bitcoin futures, swaps, and options is based on a number of factors, including the supply of and the demand for these derivatives. Market conditions and expectations, position limits, accountability levels, collateral requirements, availability of counterparties, and other factors each can impact the supply of and demand for these derivatives. Additionally, due to the high margin requirements that are unique to Bitcoin futures contracts, the Bitcoin ETFs may experience difficulty maintaining the desired level of exposure to Bitcoin solely through futures contracts. If a Bitcoin ETF is unable to achieve such exposure it may not be able to meet its investment objective and the Bitcoin ETF's returns may be different or lower than expected. Additionally, collateral requirements may require the Bitcoin ETFs to liquidate their positions, potentially incurring losses and expenses, when it otherwise would not do so. Investing in derivatives like Bitcoin futures may be considered aggressive and may expose the Bitcoin ETFs to significant risks. These risks include counterparty risk and liquidity risk.

Concentration Risk. The Fund's net asset value may fluctuate more than that of a fund that does not concentrate in Bitcoin related instruments.

Early Close/Trading Halt Risk. An exchange or market may close or issue trading halts on specific securities, or the ability to buy or sell certain securities or financial instruments may be restricted, which may prevent the Fund from buying or selling certain securities or financial instruments. In these circumstances, the Fund may be unable to rebalance its portfolio, may be unable to accurately price its investments and may incur substantial trading losses.

ETF Structure Risks. The Fund is structured as an ETF and will invest in underlying ETFs. As a result, the Fund is subject to the special risks, including:

- *Not Individually Redeemable.* The Fund's shares ("Shares") are not redeemable by retail investors and may be redeemed only by Authorized Participants at net asset value ("NAV") and only in Creation Units. A retail investor generally incurs brokerage costs when selling shares.
- *Trading Issues.* Trading in Shares on The Nasdaq Stock Market LLC (the "Exchange") may be halted due to market conditions or for reasons that, in the view of the Exchange, make trading in Shares inadvisable, such as extraordinary market volatility. There can be no assurance that Shares will continue to meet the listing requirements of the Exchange which may result in the Shares being delisted. An active trading market for the Shares may not be developed or maintained. If the Shares are traded outside a collateralized settlement system, the number of financial institutions that can act as Authorized Participants that can post collateral on an agency basis is limited, which may limit the market for the Shares.

- *Market Price Variance Risk.* The market prices of Shares will fluctuate in response to changes in NAV and supply and demand for Shares and will include a “bid-ask spread” charged by the exchange specialists, market makers or other participants that trade the Shares. There may be times when the market price and the NAV vary significantly. This means that Shares may trade at a discount to NAV.
 - In times of market stress, market makers may step away from their role market making in the Shares and in executing trades, which can lead to differences between the market value of the Shares and the Fund’s NAV.
 - The market price of the Shares may deviate from the Fund’s NAV, particularly during times of market stress, with the result that investors may pay significantly more or significantly less for the Shares than the Fund’s NAV, which is reflected in the bid and ask price for the Shares or in the closing price.
 - In stressed market conditions, the market for the Shares may become less liquid in response to the deteriorating liquidity of the Fund’s portfolio. This adverse effect on the liquidity of the Shares may, in turn, lead to differences between the market value of the Shares and the Fund’s NAV.
- *Authorized Participant Risk.* Only an Authorized Participant may engage in creation or redemption transactions directly with the Fund. The Fund has a limited number of institutions that may act as an Authorized Participant on an agency basis (i.e., on behalf of other market participants). To the extent that Authorized Participants exit the business or are unable to proceed with creation or redemption orders with respect to the Fund and no other Authorized Participant is able to step forward to create or redeem Creation Units, Fund shares may be more likely to trade at a premium or discount to net asset value and possibly face trading halts or delisting. Authorized Participant concentration risk may be heightened for securities or instruments that have lower trading volumes.

Exchange Traded Product (ETP) Risk. The Fund may invest in Bitcoin ETPs. Through its positions in Bitcoin ETPs, the Fund generally will be subject to the risks associated with such vehicle’s investments, including the possibility that the value of the securities or instruments held by or linked to a Bitcoin ETP could decrease. The Bitcoin ETPs in which the Fund invests are not registered, nor are they required to be registered, as investment companies subject to the 1940 Act and, therefore, are not subject to the regulatory scheme of the 1940 Act. When the Fund invests in a Bitcoin ETP, in addition to directly bearing the expenses associated with its own operations, it also will bear a pro rata portion of the Bitcoin ETP’s expenses (including operating costs and management fees).

Fixed Income Securities Risk. When the Fund invests in fixed income securities, the value of your investment in the Fund will fluctuate with changes in interest rates. Typically, a rise in interest rates causes a decline in the value of fixed income securities owned by the Fund. In general, the market price of fixed income securities with longer maturities will increase or decrease more in response to changes in interest rates than shorter-term securities. Other risk factors include credit risk (the debtor may default) and prepayment risk (the debtor may pay its obligation early, reducing the amount of interest payments). These risks could affect the value of a particular investment by the Fund, possibly causing the Fund’s share price and total return to be reduced and fluctuate more than other types of investments. A rise in interest rates may result in a decline in the value of the fixed income investments held by the Fund.

Leverage Risk. The use of leverage by the Fund, such as borrowing money through reverse repurchase agreements or the use of options, will cause the Fund to incur additional expenses and magnify the Fund’s gains or losses.

Market and Geopolitical Risk. The increasing interconnectivity between global economies and financial markets increases the likelihood that events or conditions in one region or financial market may adversely impact issuers in a different country, region or financial market. Assets in the Fund's portfolios may underperform due to inflation (or expectations for inflation), interest rates, global demand for particular products or resources, natural disasters, climate change or climate related events, pandemics, epidemics, terrorism, regulatory events and governmental or quasi-governmental actions. The occurrence of global events similar to those in recent years may result in market volatility and may have long term effects on both the U.S. and global financial markets.

Non-Diversification Risk. The Fund's portfolio may focus on a limited number of investments and will be subject to potential for volatility than a diversified fund.

Reverse Repurchase Agreements Risk. The reverse repurchase agreement counterparty may fail to return securities to the Fund. Such securities may be costly to replace.

TIPS Risk. TIPS are debt instruments issued by the by the United States Department of the Treasury. The principal of TIPS increases with inflation and decreases with deflation, as measured by the Consumer Price Index. When TIPS mature, investors are paid the adjusted principal or original principal, whichever is greater. Interest payments on TIPS are unpredictable and will fluctuate as the principal and corresponding interest payments are adjusted for inflation. Inflation-indexed bonds generally pay a lower nominal interest rate than a comparable non-inflation-indexed bond. There can be no assurance that the CPI will accurately measure the real rate of inflation in the prices of goods and services. Any increases in the principal amount of TIPS will be considered taxable ordinary income, even though the Fund or applicable underlying ETF will not receive the principal until maturity. As a result, the Fund may make income distributions to shareholders that exceed the cash it receives. In addition, TIPS are subject to credit risk, interest rate risk, and maturity risk.

U.S. Treasury Market Risk. The U.S. Treasury market can be volatile, and the value of instruments correlated with these markets may fluctuate dramatically from day to day. U.S. Treasury obligations may provide relatively lower returns than those of other securities. Similar to other debt instruments, U.S. Treasury obligations are subject to debt instrument risk and interest rate risk. In addition, changes to the financial condition or credit rating of the U.S. Government may cause the value of U.S. Treasury obligations to decline.

Underlying Fund Risk. ETFs and ETPs in which the Fund invests are subject to investment advisory and other expenses, which will be indirectly paid by the Fund. As a result, the cost of investing in the Fund will be higher than the cost of investing directly in the ETFs and ETPs and may be higher than other funds that invest directly in stocks and bonds. Each of the ETFs and ETPs is subject to its own specific risks, but the adviser expects the principal investments risks of such ETFs will be similar to the risks of investing in the Fund.

Valuation Risk. The sales price the Fund could receive for any particular portfolio investment may differ from the Fund's valuation of the investment, particularly for securities or other investments, such as Bitcoin, that trade in thin or volatile markets or that are valued using a fair value methodology. Valuation may be more difficult in times of market turmoil since many investors and market makers may be reluctant to purchase complex instruments or quote prices for them. The Fund's ability to value its investments may be impacted by technological issues and/or errors by pricing services or other third party service providers. Shares of the Bitcoin ETPs and Bitcoin ETFs are intended to reflect the price of bitcoin, less fees and expenses. The price of a Bitcoin ETP or Bitcoin ETF may go down even if the price of the underlying asset, bitcoin, remains unchanged. Additionally, shares that trade at a premium mean that an investor who purchases \$1 of a portfolio will actually own less than \$1 in assets.

Wholly-Owned Subsidiary Risk. Changes in the laws of the United States and/or the Cayman Islands, under which the Fund and the Subsidiary, respectively, are organized, could result in the inability of the Fund and/or Subsidiary to operate as described in this Prospectus and could negatively affect the Fund and its shareholders. The Subsidiary is not registered under the Investment Company Act of 1940 ("1940 Act"), as amended, and, unless otherwise noted in this Prospectus, is not subject to all of the investor protections of the 1940 Act, such as limits on leverage when viewed in isolation from the Fund.

Performance: The following performance information provides some indication of the risks of investing in the Fund. The bar chart shows changes in the Fund's performance from year to year. The table shows how the Fund's average annual total returns compare to those of a broad measure of market performance. The Fund's past performance (before and after taxes) is not necessarily an indication of how the Fund will perform in the future. Updated performance information is available at no cost by visiting www.simplify.us/etfs or by calling 1 (855) 772-8488.

During the periods shown in the bar chart above, the Fund's highest quarterly return was 69.81% (quarter ended March 31, 2023) and the Fund's lowest quarterly return was -16.67% (quarter ended June 30, 2024).

Average Annual Total Returns for the Periods Ended December 31, 2024

	1 Year	Since Inception (9/29/22)
Return Before Taxes	90.53%	85.63%
Return After Taxes on Distributions	67.05%	65.39%
Return After Taxes on Distributions and Sale of Fund Shares	51.64%	58.13%
S&P 500 Index (reflects no deduction for fees, expenses or taxes)	25.02%	24.42%

After-tax returns are calculated using the historical highest individual federal marginal income tax rates during the period covered by the table above and do not reflect the impact of state and local taxes. Actual after-tax returns depend on an investor's tax situation and may differ from those shown. After-tax returns shown are not relevant to investors who hold shares through tax-advantaged arrangements, such as 401(k) plans or individual retirement accounts.

Investment Adviser: Simplify Asset Management Inc. (the "Adviser").

Portfolio Managers: David Berns, Chief Investment Officer of the Adviser, and Emilio Freire, Portfolio Manager of the Adviser serve as portfolio managers of the Fund. Dr. Berns has served the Fund as a portfolio manager since it commenced operations in October 2022. Mr. Freire has served the Fund as a portfolio manager since July 2024. Dr. Berns and Mr. Freire are jointly and primarily responsible for the management of the Fund.

Purchase and Sale of Fund Shares: The Fund will issue and redeem Shares at NAV only in large blocks of 10,000 Shares (each block of Shares is called a “Creation Unit”). Creation Units are issued and redeemed primarily in-kind for securities but may include cash. Individual Shares may only be purchased and sold in secondary market transactions through brokers. Except when aggregated in Creation Units in transactions with Authorized Participants, the Shares are not redeemable securities of the Fund.

Shares of the Fund are listed for trading on the Exchange and trade at market prices rather than NAV. Shares of the Fund may trade at a price that is greater than, at, or less than NAV. An investor may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase shares of the Fund (bid) and the lowest price a seller is willing to accept for shares of the Fund (ask) when buying or selling shares in the secondary market. Recent information on the Fund’s NAV, market price, premiums and discounts, and bid-ask spreads is available at www.simplify.us/etfs.

Tax Information: The Fund’s distributions generally will be taxable as ordinary income or long-term capital gains. A sale of Shares may result in capital gain or loss.

Payments to Broker-Dealers and Other Financial Intermediaries: If you purchase the Fund through a broker-dealer or other financial intermediary (such as a bank), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary’s website for more information.

FUND SUMMARY – SIMPLIFY US EQUITY PLUS BITCOIN STRATEGY ETF

Investment Objective: The Simplify US Equity PLUS Bitcoin Strategy ETF (the “Fund” or “SPBC”) seeks long-term capital appreciation.

Fees and Expenses of the Fund: This table describes the fees and expenses that you may pay if you buy, sell, and hold shares of the Fund. **You may pay other fees, such as brokerage commissions and other fees to financial intermediaries on the purchase and sale of Fund shares, which are not reflected in the tables and examples below.**

Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment)	
Management Fees	0.50%
Distribution and Service (12b-1) Fees	0.00%
Other Expenses ⁽¹⁾	0.01%
Acquired Fund Fees and Expenses ⁽²⁾	0.25%
Total Annual Fund Operating Expenses	0.76%

(1) Other Expenses includes interest expenses of 0.01%.

(2) Acquired Fund Fees and Expenses are the indirect costs of investing in other investment companies. The operating expenses in this fee table do not correlate to the expense ratio in the Fund’s financial highlights because the financial statements include only the direct operating expenses incurred by the Fund.

Example: This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds.

The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then redeem all of your shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund’s operating expenses remain the same. Although your actual costs may be higher or lower, based upon these assumptions your costs would be:

1 Year	3 Years	5 Years	10 Years
\$78	\$243	\$422	\$942

Portfolio Turnover: The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Fund shares are held in a taxable account. These costs, which are not reflected in annual fund operating expenses or in the Example, affect the Fund’s performance. During the most recent fiscal year, the Fund’s portfolio turnover rate was 21% of the average value of its portfolio.

Principal Investment Strategies: The Fund has adopted a non-fundamental policy that, under normal circumstances, the Fund will invest at least 80% of its net assets (plus any borrowings for investment purposes) in equity securities of U.S. companies, exchange-traded products with direct exposure to Bitcoin (“Bitcoin ETPs”), and exchange-traded funds with indirect exposure to Bitcoin primarily through Bitcoin futures, options, swaps, or other derivative instruments (“Bitcoin ETFs”).

US Equity Strategy

The Fund invests in equity securities of U.S. companies through (i) exchange-traded futures contracts, (ii) equity securities of U.S. companies, and (iii) ETFs that primarily invest in the equity securities of U.S. companies. The Fund defines equity securities as common stock, preferred stock, or futures on common or preferred stock. The Fund defines U.S. companies as those organized in the U.S.; having a class of securities whose principal securities market is in the U.S.; or derives 50% or more of its total revenues or earnings from goods produced, sales made, or services provided in the U.S., or maintains 50% or more of its employees, assets, investments, operations, or other business activity in the U.S. The Fund invests in companies without restriction as to capitalization.

The Adviser believes that, based upon its historical research, a base allocation to equities will make a significant contribution to long-term capital appreciation, while providing dividend income to help offset Fund operating expenses. The Adviser evaluates expected return, expenses, management, and leveraging effects when initially choosing between specific stocks, ETFs, and futures and evaluates allocations among these instruments on an ongoing basis to determine whether any adjustments to the allocations would provide better expected returns. The Adviser does not frequently trade US equities but seeks to maintain consistent exposure to the US equity market.

Bitcoin Strategy

The Fund targets a 10% of total assets allocation to Bitcoin ETPs and Bitcoin ETFs. The Fund generally rebalances this allocation quarterly, but will rebalance more frequently to ensure the allocation does not exceed 25% of its total assets. Bitcoin ETPs are investment vehicles that track the price of Bitcoin by directly holding actual Bitcoin (called “spot”) as their underlying asset while Bitcoin ETFs primarily invest in derivatives linked to Bitcoin to gain exposure to Bitcoin. The Bitcoin ETPs and Bitcoin ETFs trade on a U.S.-regulated securities exchange. Unlike Bitcoin ETFs, Bitcoin ETPs are not registered as investment companies under the Investment Company Act of 1940, as amended (the “1940 Act”). The Adviser selects specific Bitcoin ETPs and Bitcoin ETFs (including affiliated Bitcoin ETFs) that it believes offer sufficient liquidity and relatively low expenses.

Description of Bitcoin and Bitcoin Blockchain

Bitcoin is a digital asset that operates on a decentralized network using blockchain technology to facilitate secure and anonymous transactions. Bitcoin represents a digital asset that functions as a medium of exchange (although it is not widely used in this manner at present) utilizing cryptographic protocols to secure transactional processes, control the creation of additional units, and verify the transfer of assets. Its operation on a decentralized blockchain network ensures both transparency and immutability of records, without the need for a central authority. This innovative technology underpinning Bitcoin allows for peer-to-peer transactions and provides a framework for digital scarcity.

The Bitcoin blockchain constitutes a decentralized, digital ledger technology that chronologically and publicly records all Bitcoin transactions. This technology is characterized by its use of blocks, which are structurally linked in a chain through cryptographic hashes. Each block contains a list of transactions that, once verified and added to the blockchain through a consensus process known as proof of work, become extremely difficult to reverse and tamper with. The integrity, transparency, and security of the transactional data are maintained autonomously within the Bitcoin network, eliminating the necessity for central oversight and facilitating trust in a peer-to-peer system.

The Fund will not invest directly in Bitcoin, Bitcoin futures, or other crypto assets. The Fund is not expected to track the price movements of crypto assets.

Principal Investment Risks: *As with all funds, there is the risk that you could lose money through your investment in the Fund. Many factors affect the Fund's NAV and price of shares and performance.*

The following describes the principal risks the Fund bears with respect to its investments. As with any fund, there is no guarantee that the Fund will achieve its goal.

Bitcoin Risk. The value of the Fund's investment in Bitcoin ETPs and Bitcoin ETFs are subject to fluctuations in the value of Bitcoin. Bitcoin is a relatively new innovation and the market for Bitcoin is subject to rapid price swings, changes and uncertainty. The further development of the Bitcoin network and the acceptance and use of Bitcoin are subject to a variety of factors that are difficult to evaluate. The value of Bitcoin has been, and may continue to be, substantially dependent on speculation, such that trading and investing in these assets generally may not be based on fundamental analysis. The slowing, stopping or reversing of the development of the Bitcoin network or the acceptance of Bitcoin may adversely affect the price of Bitcoin. Bitcoin is subject to the risk of fraud, theft, manipulation or security failures, operational or other problems that impact the digital asset trading venues on which Bitcoin trades. The Bitcoin blockchain may contain flaws that can be exploited by hackers. A significant portion of Bitcoin is held by a small number of holders sometimes referred to as “whales.” Transactions of these holders may influence the price of Bitcoin.

Unlike the exchanges for more traditional assets, such as equity securities and futures contracts, Bitcoin and the digital asset trading venues on which it trades are largely unregulated and highly fragmented and digital asset trading venues may be operating out of compliance with regulations. As a result of the lack of regulation, individuals or groups may engage in fraud or market manipulation (including using social media to promote Bitcoin in a way that artificially increases the price of Bitcoin). Investors may be more exposed to the risk of theft, fraud and market manipulation than when investing in more traditional asset classes. Over the past several years, a number of digital asset trading venues have been closed due to fraud, failure or security breaches. Investors in Bitcoin may have little or no recourse should such theft, fraud or manipulation occur and could suffer significant losses. Legal or regulatory changes may negatively impact the operation of the Bitcoin network or restrict the use of Bitcoin. The Bitcoin ETPs and Bitcoin ETFs may also be negatively impacted by regulatory enforcement actions against the digital asset trading venues upon which Bitcoin trades. Such actions could significantly reduce the number of venues upon which Bitcoin trades and could negatively impact the Bitcoin held by the Bitcoin ETPs and the Bitcoin futures contracts held by the Bitcoin ETFs that reference the price of Bitcoin. In addition, digital asset trading venues, Bitcoin miners, and other participants may have significant exposure to other digital assets. Instability in the price, availability or legal or regulatory status of those instruments may adversely impact the operation of the digital asset trading venues and the Bitcoin network. The realization of any of these risks could result in a decline in the acceptance of Bitcoin and consequently a reduction in the value of Bitcoin, Bitcoin futures contracts, and shares of the Bitcoin ETPs and Bitcoin ETFs. Such occurrences could also impair the Bitcoin ETPs' and Bitcoin ETFs' ability to meet their investment objective pursuant to their respective investment strategy.

The Bitcoin network is maintained and secured by a group of validators who “mine” Bitcoin, which involves contributing computer power to the network to validate transactions, maintain security and finalize settlement. The Bitcoin blockchain relies on a consensus mechanism whereby miners agree on the accurate state of the database. If a malicious actor (or group of actors) were to gain control of more than 50% the mining (or “hash”) power in the network, even temporarily, they would have the ability to block new transactions from being confirmed and could, over time, reverse or reorder prior transactions. Although it may be challenging for a malicious actor (or group of actors) to gain control of 50% of the mining (or “hash”) power in the Bitcoin blockchain, such an attack would significantly impact the value of Bitcoin, and thereby of the Bitcoin held by the Bitcoin ETPs and the Bitcoin futures contracts held by the Bitcoin ETF.

A blockchain is a public database that is updated, shared and maintained across many computers in a network. The software that powers a blockchain is known as its protocol. Like all software, these protocols may update or change from time-to-time. In the case of the Bitcoin protocol, updates are made based on proposals submitted by developers, but only if a majority of the users and miners adopt the new proposals and update their individual copies of the protocol. Certain upgrade proposals to a blockchain may not be accepted by all the participants in an ecosystem. If one significant group adopts a proposed upgrade and another does not – or if groups adopt different upgrades – this can result in a “fork” of the blockchain, wherein two distinct sets of users and validators or users and miners run two different versions of a protocol. If the versions are sufficiently different such that the two versions of the protocol cannot simultaneously maintain and update a shared record of the blockchain database, it is called a “hard fork.” A hard fork can result in the creation of two competing blockchains, each with its own native crypto assets. For instance, on August 1, 2017, two factions in the Bitcoin community could not agree on whether or not to adopt an upgrade to the Bitcoin protocol related to how to scale throughput on the blockchain. The disagreement created a fork, with the smaller group taking the name “Bitcoin Cash” and running its own blockchain and related native crypto asset. The larger group retained the name Bitcoin for its blockchain and held Bitcoin as the native crypto asset. Additional forks of the Bitcoin blockchain are possible. A large-scale fork could introduce risk, uncertainty, or confusion into the Bitcoin blockchain, or could fraction the value of the main blockchain and its native crypto asset, which could significantly impact the value of Bitcoin held by the Bitcoin ETPs and Bitcoin futures contracts held by the Bitcoin ETFs. Additionally, a hack of the Bitcoin blockchain or one or more projects that interact with or that are built on top of the Bitcoin blockchain could negatively impact the price of Bitcoin, whether it leads to another hard fork or not, and thereby the value of the Bitcoin held by the Bitcoin ETPs, and the Bitcoin futures contracts held by the Bitcoin ETFs.

The Bitcoin blockchain and its native crypto asset, Bitcoin, face numerous challenges to gaining widespread adoption as an alternative payments system, including the slowness of transaction processing and finality, variability in transaction fees and volatility in Bitcoin's price. It is not clear that the Bitcoin blockchain or Bitcoin can overcome these and other impediments, which could harm the long-term adoption of the Bitcoin blockchain and Bitcoin as an alternative payment system, and thereby negatively impact the price of Bitcoin. In addition, alternative public blockchains have been developed and may in the future develop that compete with the Bitcoin blockchain and may have significant advantages as alternative payment systems, including higher throughput, lower fees, faster settlement and finalization, and the ability to facilitate untraceable and/or privacy-shielded transactions through the use of zero-knowledge cryptography or other means. It is possible that these alternative public blockchains and their native crypto assets may be more successful than the Bitcoin blockchain and Bitcoin in gaining adoption as an alternative payments system, which could limit the long-term adoption of the Bitcoin blockchain and Bitcoin, thereby negatively impact the price of Bitcoin. Such alternative public blockchains, such as the Ethereum network, allow users to write and implement smart contracts—that is, general-purpose code that executes on every computer in the network and can instruct the transmission of information and value based on a sophisticated set of logical conditions. Using smart contracts, users can create markets, store registries of debts or promises, represent the ownership of property, move funds in accordance with conditional instructions and create other digital assets. Furthermore, traditional payment systems may improve their own technical capabilities and offer faster settlement times, faster finalization and lower fees. This could make it more difficult for the Bitcoin blockchain and Bitcoin to gain traction as an alternative payments system, which could limit the long-term adoption of the Bitcoin blockchain and Bitcoin, and thereby negatively impact the price of Bitcoin. Finally, one means by which the ecosystem surrounding the Bitcoin blockchain has attempted to mitigate concerns about the slowness of transaction processing and finality and the variability of transaction fees has been through the development of so-called Layer 2 networks, including the “Lightning Network.” Layer 2 networks are separate blockchains built on top of “Layer 1” blockchains like the Bitcoin blockchain for the purpose of augmenting the throughput of the Layer 1 blockchain, and often, providing lower fees for transaction processing and faster settlement. Layer 2 blockchains introduce certain risks into the Bitcoin ecosystem that should be considered. For instance, Layer 2 blockchains are a relatively new and still developing technology. Technological issues – including hacks, bugs, or failures – could introduce risk or harm confidence in the Bitcoin ecosystem, which could negatively impact the price of Bitcoin. In addition, users may choose to settle an increasing share of transactions on Layer 2 blockchains, which could negatively impact the transaction activity on, and the amount of fee revenue generated by, the Bitcoin blockchain itself, which could negatively impact the price of Bitcoin. If these or other developments negatively impact the price of Bitcoin, this would negatively impact the value of the Bitcoin ETPs and Bitcoin ETFs.

The realization of any of these risks could result in a decline in the acceptance of Bitcoin and consequently a reduction in the value of Bitcoin, Bitcoin ETPs, Bitcoin ETFs, and the Fund.

Bitcoin Tax Risk. The Fund's investments in Bitcoin ETPs or similar investment vehicles are grantor trusts for U.S. federal income tax purposes, and therefore an investment by the Fund directly in such an investment will generally be treated as a direct investment in Bitcoin for such purposes. In order to qualify for the special tax treatment accorded a regulated investment company (“RIC”) and its shareholders, Subchapter M of the Internal Revenue Code of 1986, as amended (the “Code”) requires, among other things, that at least 90% of the Fund's income be “qualifying income.” Although the income from Bitcoin ETPs in which the Fund invests is not treated as qualifying income, the Fund avoids the recognition of any income from Bitcoin ETPs by handling any Bitcoin ETP transactions with Authorized Participants (“AP”) through in-kind creations and redemptions. For example, if the Fund wants to reduce its exposure to Bitcoin ETPs, it may deliver a basket of the Bitcoin ETPs to the AP in exchange for shares of the Fund. The Bitcoin ETPs are not sold by the Fund and therefore, no income is generated for the Fund. To the extent the IRS disagrees with the Fund's view regarding the use of the in-kind creation and redemptions to avoid recognition of non-qualifying income from Bitcoin ETPs, then the Fund may fail to qualify as a RIC under the Code. If, in any year, the Fund fails to qualify as a RIC and was ineligible to or was not able to cure such failure, the Fund would be taxed in the same manner as an ordinary corporation and subject to U.S. federal income tax on all its income at the fund level. The resulting taxes could substantially reduce the Fund's net assets and the amount of income available for distribution. In addition, in order to requalify for taxation as a RIC, the Fund could be required to recognize unrealized gains, pay substantial taxes and interest, and make certain distributions. See “Authorized Participant Risk” below for additional risks regarding APs.

Active Management Risk. The Fund is subject to the risk that the investment management strategy may not produce the intended results and may negatively impact Fund performance.

Affiliated ETF Conflict of Interest Risk. Because the Fund may invest in an affiliated Bitcoin ETF, the adviser is subject to conflicts of interest in allocating the Fund's assets to the affiliated Bitcoin ETF. The adviser will receive more revenue to the extent it selects an affiliated Bitcoin ETF rather than an unaffiliated ETF for inclusion in the Fund's portfolio.

Bitcoin ETF Risks. **The Bitcoin ETFs do not invest directly in Bitcoin.** Instead, the Bitcoin ETFs obtain indirect exposure to Bitcoin by investing in Bitcoin futures, swaps, and/or options. The market for derivatives linked to Bitcoin may be less developed, and potentially less liquid and more volatile, than more established markets. While these markets have grown substantially since Bitcoin derivatives commenced trading, there can be no assurance that this growth will continue. The price for Bitcoin futures, swaps, and options is based on a number of factors, including the supply of and the demand for these derivatives. Market conditions and expectations, position limits, accountability levels, collateral requirements, availability of counterparties, and other factors each can impact the supply of and demand for these derivatives. Additionally, due to the high margin requirements that are unique to Bitcoin futures contracts, the Bitcoin ETFs may experience difficulty maintaining the desired level of exposure to Bitcoin solely through futures contracts. If a Bitcoin ETF is unable to achieve such exposure it may not be able to meet its investment objective and the Bitcoin ETF's returns may be different or lower than expected. Additionally, collateral requirements may require the Bitcoin ETFs to liquidate their positions, potentially incurring losses and expenses, when it otherwise would not do so. Investing in derivatives like Bitcoin futures may be considered aggressive and may expose the Bitcoin ETFs to significant risks. These risks include counterparty risk and liquidity risk.

Derivatives Risk. Options are a derivative investment. The use of derivative instruments involves risks different from, or possibly greater than, the risks associated with investing directly in securities and other traditional investments. These risks include (i) the risk that the counterparty to a derivative transaction may not fulfil its contractual obligations; (ii) risk of mispricing or improper valuation; and (iii) the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, rate or index. Derivative prices are highly volatile and may fluctuate substantially during a short period of time. Such prices are influenced by numerous factors that affect the markets, including, but not limited to: changing supply and demand relationships; government programs and policies; national and international political and economic events, changes in interest rates, inflation and deflation and changes in supply and demand relationships.

Early Close/Trading Halt Risk. An exchange or market may close or issue trading halts on specific securities, or the ability to buy or sell certain securities or financial instruments may be restricted, which may prevent the Fund from buying or selling certain securities or financial instruments. In these circumstances, the Fund may be unable to rebalance its portfolio, may be unable to accurately price its investments and may incur substantial trading losses.

Equity Securities Risk. The net asset value of the Fund will fluctuate based on changes in the value of the U.S. equity securities held by the Fund. Equity prices can fall rapidly in response to developments affecting a specific company or industry, or to changing economic, political or market conditions.

ETF Structure Risks. The Fund is structured as an ETF and will invest in underlying ETFs or ETPs. As a result, the Fund is subject to special risks, including:

- *Not Individually Redeemable.* The Fund's shares ("Shares") are not redeemable by retail investors and may be redeemed only by authorized participant ("Authorized Participant") at net asset value ("NAV") and only in Creation Units. A retail investor generally incurs brokerage costs when selling shares.
- *Trading Issues.* Trading in Shares on the Nasdaq Stock Market LLC (the "Exchange") may be halted due to market conditions or for reasons that, in the view of the Exchange, make trading in Shares inadvisable, such as extraordinary market volatility. There can be no assurance that Shares will continue to meet the listing requirements of the Exchange which may result in the Shares being delisted. An active trading market for the Shares may not be developed or maintained. If the Shares are traded outside a collateralized settlement system, the number of financial institutions that can act as Authorized Participants that can post collateral on an agency basis is limited, which may limit the market for the Shares.

- *Market Price Variance Risk.* The market prices of Shares will fluctuate in response to changes in NAV and supply and demand for Shares and will include a “bid-ask spread” charged by the exchange specialists, market makers or other participants that trade the Shares. There may be times when the market price and the NAV vary significantly. This means that Shares may trade at a discount to NAV.
 - In times of market stress, market makers may step away from their role market making in the Shares and in executing trades, which can lead to differences between the market value of the Shares and the Fund’s NAV.
 - The market price of the Shares may deviate from the Fund’s NAV, particularly during times of market stress, with the result that investors may pay significantly more or significantly less the Shares than the Fund’s NAV, which is reflected in the bid and ask price for the Shares or in the closing price.
 - In stressed market conditions, the market for the Shares may become less liquid in response to the deteriorating liquidity of the Fund’s portfolio. This adverse effect on the liquidity of the Shares may, in turn, lead to differences between the market value of the hares and the Fund’s NAV.
- *Authorized Participant Risk.* Only an Authorized Participant may engage in creation or redemption transactions directly with the Fund. The Fund has a limited number of institutions that may act as an Authorized Participant on an agency basis (i.e., on behalf of other market participants). To the extent that Authorized Participants exit the business or are unable to proceed with creation or redemption orders with respect to the Fund and no other Authorized Participant is able to step forward to create or redeem Creation Units, Fund shares may be more likely to trade at a premium or discount to net asset value and possibly face trading halts or delisting. Authorized Participant concentration risk may be heightened for securities or instruments that have lower trading volumes.

Exchange Traded Product (ETP) Risk. The Fund invests in Bitcoin ETPs. Through its positions in Bitcoin ETPs, the Fund generally will be subject to the risks associated with such vehicle’s investments, including the possibility that the value of the securities or instruments held by or linked to a Bitcoin ETP could decrease. The Bitcoin ETPs in which the Fund invests are not registered, nor are they required to be registered, as investment companies subject to the 1940 Act and, therefore, are not subject to the regulatory scheme of the 1940 Act. When the Fund invests in a Bitcoin ETP, in addition to directly bearing the expenses associated with its own operations, it also will bear a pro rata portion of the Bitcoin ETP’s expenses (including operating costs and management fees).

Futures Contract Risk. The successful use of futures contracts draws upon the adviser’s skill and experience with respect to such instruments and are subject to special risk considerations. The primary risks associated with the use of futures contracts are (a) the imperfect correlation between the change in market value of the instruments held by the Fund and the price of the forward or futures contract; (b) possible lack of a liquid secondary market for a forward or futures contract and the resulting inability to close a forward or futures contract when desired; (c) investments in futures contracts involves leverage, which means a small percentage of assets in futures can have a disproportionately large impact on the Fund and the Fund can lose more than the principal amount invested; (d) losses caused by unanticipated market movements, which are potentially unlimited; I the adviser’s inability to predict correctly the direction of securities prices, interest rates, currency exchange rates and other economic factors; (f) the possibility that the counterparty will default in the performance of its obligations; and (g) if the Fund has insufficient cash, it may have to sell securities from its portfolio to meet daily variation margin requirements, and the Fund may have to sell securities at a time when it may be disadvantageous to do so.

Large Capitalization Risk. Large-capitalization companies may be less able than smaller capitalization companies to adapt to changing market conditions. Large-capitalization companies may be more mature and subject to more limited growth potential compared with smaller capitalization companies. During different market cycles, the performance of large capitalization companies has trailed the overall performance of the broader securities markets.

Market and Geopolitical Risk. The increasing interconnectivity between global economies and financial markets increases the likelihood that events or conditions in one region or financial market may adversely impact issuers in a different country, region or financial market. Securities in the Fund's portfolios may underperform due to inflation (or expectations for inflation), interest rates, global demand for particular products or resources, climate change or climate related events, natural disasters, pandemics, epidemics, terrorism, international conflicts, regulatory events and governmental or quasi-governmental actions. The occurrence of global events similar to those in recent years may result in market volatility and may have long term effects on both the U.S. and global financial markets.

Small and Medium Capitalization Risk. The earnings and prospects of small and medium sized companies are more volatile than larger companies and may experience higher failure rates than larger companies. Small and medium sized companies normally have a lower trading volume than larger companies, which may tend to make their market price fall more disproportionately than larger companies in response to selling pressures and may have limited markets, product lines, or financial resources and lack management experience.

Underlying Fund Risk. ETFs and ETPs in which the Fund invests are subject to investment advisory and other expenses, which will be indirectly paid by the Fund. As a result, the cost of investing in the Fund will be higher than the cost of investing directly in the ETFs and ETPs and may be higher than other funds that invest directly in stocks and bonds. Each of the ETFs and ETPs is subject to its own specific risks, but the adviser expects the principal investments risks of such funds will be similar to the risks of investing in the Fund.

Valuation Risk. The sales price the Fund could receive for any particular portfolio investment may differ from the Fund's valuation of the investment, particularly for securities or other investments, such as Bitcoin, that trade in thin or volatile markets or that are valued using a fair value methodology. Valuation may be more difficult in times of market turmoil since many investors and market makers may be reluctant to purchase complex instruments or quote prices for them. The Fund's ability to value its investments may be impacted by technological issues and/or errors by pricing services or other third party service providers. Shares of the Bitcoin ETPs and Bitcoin ETFs are intended to reflect the price of Bitcoin, less fees and expenses. The price of a Bitcoin ETP or Bitcoin ETF may go down even if the price of the underlying asset, Bitcoin, remains unchanged. Additionally, shares that trade at a premium mean that an investor who purchases \$1 of a portfolio will actually own less than \$1 in assets.

Performance: The following performance information provides some indication of the risks of investing in the Fund. The bar chart shows changes in the Fund's performance from year to year. The table shows how the Fund's average annual total returns compare to those of a broad measure of market performance. The Fund's past performance (before and after taxes) is not necessarily an indication of how the Fund will perform in the future. Updated performance information is available at no cost by visiting www.simplify.us/etfs or by calling 1 (855) 772-8488.

During the periods shown in the bar chart above, the Fund's highest quarterly return was 19.38% (quarter ended December 31, 2023) and the Fund's lowest quarterly return was -22.63% (quarter ended June 30, 2022).

Average Annual Total Returns for the Periods Ended December 31, 2024

	1 Year	Since Inception (5/25/21)
Return Before Taxes	37.07%	15.48%
Return After Taxes on Distributions	36.48%	14.53%
Return After Taxes on Distributions and Sale of Fund Shares	21.92%	11.76%
S&P 500 Index (reflects no deduction for fees, expenses or taxes)	25.02%	11.79%

After-tax returns are calculated using the historical highest individual federal marginal income tax rates during the period covered by the table above and do not reflect the impact of state and local taxes. Actual after-tax returns depend on an investor's tax situation and may differ from those shown. After-tax returns shown are not relevant to investors who hold shares through tax-advantaged arrangements, such as 401(k) plans or individual retirement accounts.

Investment Adviser: Simplify Asset Management Inc. (the "Adviser").

Portfolio Managers: David Berns, Chief Investment Officer of Adviser; and Jeff Schwarte, Chief Equity Strategist of the Adviser serve as portfolio managers of the Fund. Dr. Berns has served the Fund as a portfolio manager since it commenced operations in September 2020 and Mr. Schwarte has served the Fund as a portfolio manager since November 2024. Dr. Berns and Mr. Schwarte are jointly and primarily responsible for the management of the Fund.

Purchase and Sale of Fund Shares: The Fund will issue and redeem Shares at NAV only in large blocks of 25,000 Shares (each block of Shares is called a "Creation Unit"). Creation Units are issued and redeemed primarily in-kind for securities but may include cash. Individual Shares may only be purchased and sold in secondary market transactions through brokers. Except when aggregated in Creation Units in transactions with Authorized Participants, the Shares are not redeemable securities of the Fund.

Shares of the Fund are listed for trading on the Exchange and trade at market prices rather than NAV. Shares of the Fund may trade at a price that is greater than, at, or less than NAV. An investor may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase shares of the Fund (bid) and the lowest price a seller is willing to accept for shares of the Fund (ask) when buying or selling shares in the secondary market. Recent information on the Fund's NAV, market price, premiums and discounts, and bid-ask spreads is available at www.simplify.us/etfs.

Tax Information: The Fund's distributions generally will be taxable as ordinary income or long-term capital gains. A sale of Shares may result in capital gain or loss.

Payments to Broker-Dealers and Other Financial Intermediaries: If you purchase the Fund through a broker-dealer or other financial intermediary (such as a bank), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's website for more information.

ADDITIONAL INFORMATION ABOUT PRINCIPAL INVESTMENT STRATEGIES AND RELATED RISKS

INVESTMENT OBJECTIVE:

Fund	Investment Objective
MAXI	income and capital appreciation
SPBC	long-term capital appreciation

Each Fund's investment objective may be changed by the Board of Trustees (the "Board") without shareholder approval upon written notice to shareholders.

PRINCIPAL INVESTMENT STRATEGIES:

Simplify Bitcoin Strategy PLUS Income ETF

The Fund is an actively managed exchange-traded fund (an "ETF"). The Fund's Adviser seeks to achieve the Fund's investment objective by using three strategies: (1) a Bitcoin strategy, (2) an income strategy, and (3) an option overlay strategy.

The Fund does not invest in Bitcoin directly.

Bitcoin Strategy

The Adviser seeks capital gains through a Bitcoin strategy. Under normal market conditions, the Adviser selects investments in Bitcoin related instruments so that the total value of economic Bitcoin exposure is between 50% to 200% of the net assets of the Fund. The Adviser uses a proprietary economic model to establish Bitcoin exposure along the 50% to 200% continuum. The proprietary model uses historical data to identify price and volatility trends and then predict current market behavior. The Adviser increases or decreases Bitcoin exposure based on the direction of the trends. The Bitcoin related instruments in which the Fund invests are Bitcoin futures, exchange-traded products with direct exposure to Bitcoin ("Bitcoin ETPs"), exchange-traded funds with indirect exposure to Bitcoin primarily through futures, options, swaps, or other derivatives investments ("Bitcoin ETFs"), and options and swaps linked to Bitcoin ETPs and Bitcoin ETFs as well as swaps and options on Bitcoin. The Adviser selects the instrument or instruments it believes presents the most economically efficient means to capture Bitcoin returns. The Adviser may reallocate among instruments when one becomes more economically efficient.

Bitcoin Futures and Swaps

Bitcoin futures are intended to track, although not lockstep, the price of Bitcoin. The Fund only invests in standardized, cash-settled Bitcoin futures contracts traded on commodity exchanges registered with the Commodity Futures Trading Commission. As of the date of this prospectus, only regulated U.S. exchanges have such contracts. The value of Bitcoin futures is determined by reference to the underlying reference asset (the spot price of Bitcoin as measured by the relevant futures exchange, which is based on a survey of major spot Bitcoin exchanges). The Adviser invests primarily in front-month Bitcoin futures. Front-month Bitcoin futures contracts are those contracts with the shortest time to maturity.

The Fund may also gain exposure to Bitcoin by entering into swap agreements that use Bitcoin, a Bitcoin ETF or Bitcoin ETP as the reference asset. A swap agreement is a two-party contract entered into primarily by institutional investors for periods ranging from a day to more than one year. In a standard "swap" transaction, two parties agree to exchange the returns (or differentials in rates of return) earned or realized on particular predetermined investments or instruments. The swap agreements entered into by the Fund may provide exposure to a single Bitcoin ETF or Bitcoin ETP, multiple Bitcoin ETPs and/or Bitcoin ETFs, or solely to Bitcoin. The particular Bitcoin ETF or Bitcoin ETP used as the reference asset for one or more of the Fund's swap agreements may change at any time based on a variety of factors, including market conditions, counterparty terms, and the liquidity, performance, and fees of those Bitcoin ETFs and Bitcoin ETPs.

Bitcoin ETPs and Bitcoin ETFs

Bitcoin ETPs are investment vehicles that track the price of Bitcoin by directly holding actual Bitcoin (called “spot”) as their underlying asset while Bitcoin ETFs primarily invest in Bitcoin futures, options, swaps, or other derivative instruments to gain exposure to Bitcoin. The Bitcoin ETPs and Bitcoin ETFs trade on a U.S.-regulated securities exchange. Unlike Bitcoin ETFs, Bitcoin ETPs are not registered as investment companies under the Investment Company Act of 1940, as amended (the “1940 Act”). The Adviser selects specific Bitcoin ETPs and Bitcoin ETFs that it believes offer sufficient liquidity and relatively low expenses.

Options on Bitcoin, Bitcoin Futures, Bitcoin ETFs and Bitcoin ETPs

In effectuating the Fund’s Bitcoin strategy, the Fund may purchase call options contracts that utilize Bitcoin, Bitcoin futures, a Bitcoin ETF or Bitcoin ETP as the reference asset. To implement the Bitcoin options strategy, the Fund invests in over-the-counter options on Bitcoin and traditional exchange-traded options on Bitcoin futures, Bitcoin ETFs, Bitcoin ETPs, or an index of Bitcoin ETPs and/or FLEXible EXchange® options (“FLEX Options”) that utilize a Bitcoin ETF or Bitcoin ETP as the reference asset. The Fund will close out over-the-counter options on Bitcoin prior to expiration so that it does not take delivery of Bitcoin. The Fund expects to primarily invest in options contracts that are listed, traded and cleared on regulated U.S. exchanges. Traditional exchange-traded options have standardized terms, such as the type (call or put), the reference asset, the strike price and expiration date. Exchange-listed options contracts are guaranteed for settlement by the Options Clearing Corporation (“OCC”). FLEX Options are a type of exchange-listed options contract with uniquely customizable terms that allow investors to customize key terms like type, strike price and expiration date that are standardized in a typical options contract. FLEX Options are also guaranteed for settlement by the OCC.

Additional Information on Bitcoin

Bitcoin is a digital asset that is created and transmitted through the operations of the Bitcoin network. The ownership of Bitcoin is determined by participants in the Bitcoin network. The Bitcoin network connects computers that run publicly accessible, or “open source,” software that follows the rules and procedures governing the Bitcoin network. This is commonly referred to as the Bitcoin Protocol. Bitcoin, the asset, plays a key role in the operation of the Bitcoin network, as the computers (or “miners”) that process transactions on the network and maintain the network’s security are compensated through the issuance of new Bitcoin and through transaction fees paid by users in Bitcoin.

No single entity owns or operates the Bitcoin network. Bitcoin is not issued by any government, by banks or similar organizations. The infrastructure of the Bitcoin network is collectively maintained by a decentralized user base. The Bitcoin network is accessed through software, and software governs the creation, movement, and ownership of “Bitcoin,” the unit of account on the Bitcoin network ledger. The value of Bitcoin is determined, in part, by the supply of, and demand for, Bitcoin in the global markets for trading Bitcoin, market expectations for the adoption of Bitcoin as a decentralized store of value, the number of merchants and/or institutions that accept Bitcoin as a form of payment and the volume of private end-user-to-end-user transactions.

Bitcoin transaction and ownership records are reflected on the “Bitcoin blockchain,” which is a digital public record or ledger. Copies of this ledger are stored in a decentralized manner on the computers of each Bitcoin network node (a node is any user who maintains on their computer a full copy of all the Bitcoin transaction records, the blockchain, as well as related software). Transaction data is permanently recorded in files called “blocks,” which reflect transactions that have been recorded and authenticated by Bitcoin network participants. The Bitcoin network software source code includes protocols that govern the creation of new Bitcoin and the cryptographic system that secures and verifies Bitcoin transactions.

Income Strategy

The Adviser seeks to generate income through an income strategy focused on high-quality short-term debt instruments: U.S. Treasury securities, U.S. Treasury Inflation-Protected Securities (“TIPS”) and fixed-income ETFs that invest primarily in U.S. Treasury securities. A portion of these securities serve as collateral for the Fund’s futures, swaps, and options positions. Additionally, the Fund increases its income producing portfolio through leverage by entering into reverse repurchase agreements. Reverse repurchase agreements are contracts in which the Fund is a seller of securities under an agreement to buy the securities back at a specified time and price. Reverse repurchase agreements are used by the Fund as an indirect means of borrowing.

Option Overlay Strategy

The Adviser seeks additional capital gains through an option overlay strategy with up to 20% of Fund assets. However, gains from written option premiums are often referred to as income. The option overlay strategy consists of an over-the-counter and exchange-traded put and call option spread writing strategy on instruments linked to equities, fixed income, volatility indices, commodities, currencies, and Bitcoin. The equity and fixed income strategies include primarily U.S. companies but may include companies from both emerging and developed foreign markets and may include companies of any market capitalization. The commodity strategies may include all types of commodities and commodity indexes. Currency strategies are those that attempt to profit from the changes in the relative value of various currencies. Volatility strategies are those that attempt to profit from the changes in the historical or implied return volatility of futures or securities indexes. Volatility is a measure of a reference asset’s historical or expected future price movements. The Bitcoin related options in which the Fund may invest include exchange traded options on Bitcoin, Bitcoin futures, Bitcoin ETFs, Bitcoin ETPs, or an index of Bitcoin ETPs.

A call option gives the owner the right, but not the obligation, to buy a security, index future, ETF, or reference asset at a specified price (strike price) within a specific time period. A put option gives the owner the right, but not the obligation, to sell index futures or sell a security, index future, ETF, or reference asset at a specified price (strike price) within a specific time period.

Put Spread Sub-Strategy

In a put option spread, the Fund sells (writes) an at the money or out of the money (below current market price) put option while also purchasing a further out of the money put option. The written put option is intended to generate income, and the purchased put option is intended to partially limit the Fund’s potential losses from the written put option. The Adviser selects written put options that it believes will expire worthless or are likely to decline in value.

Call Spread Sub Strategy

In a call option spread, the Fund sells (writes) an at the money or out of the money (above current market price) call option while also purchasing a further out of the money call option. The purchased call option is intended to limit the Fund’s potential losses from the written call option. The Adviser selects written call options that it believes will expire worthless or are likely to decline in value.

Generally, the Adviser selects among the options linked strategies based upon its evaluation of relative value based on cost, strike price (price that the optioned asset can be bought or sold by the option holder) and maturity (the last date the option contract is valid) and will exercise or close the options based on approaching maturity or opportunistic portfolio rebalancing. The Fund anticipates purchasing and selling options on a weekly, monthly, quarterly, and annual basis, depending upon the Fund’s rebalancing requirements and the individual option expiration dates. However, the Fund may rebalance its option portfolio on a more frequent basis for a number of reasons such as if market volatility renders the protection provided by the option strategy less effective or ineffective or an option position has appreciated to the point that it is prudent to decrease the Fund’s exposure and realize gains for the Fund’s shareholders. While the option overlay is intended to improve the Fund’s performance, there is no guarantee that it will do so.

Subsidiary

The Fund executes a portion of its Bitcoin strategy indirectly by investing up to 25% of its total assets (measured at the time of investment) in a wholly owned and controlled subsidiary, the Simplify Bitcoin Strategy PLUS Income Cayman Fund (the “Subsidiary”), which is designed to enhance the ability of the Fund to obtain indirect exposure to the Bitcoin market consistent with the limits of the U.S. federal tax law requirements applicable to registered investment companies. The Fund expects to gain exposure to Bitcoin futures, Bitcoin swaps, Bitcoin ETP swaps, options on Bitcoin, Bitcoin futures, Bitcoin ETPs, an index of Bitcoin ETPs, volatility indices, and commodities through the Subsidiary. The Fund does not control any other entity. The Subsidiary is advised by the Adviser. Unlike the Fund, the Subsidiary may invest without limitation indirectly in Bitcoin-related investments, however, the Subsidiary will comply with the same Investment Company Act of 1940 asset coverage requirements, when viewed on a consolidated basis with the Fund, with respect to its investments in derivatives; and also complies with the provisions of the Investment Company Act of 1940 in Section 15 (regarding investment advisory contract approvals).

The Fund is classified as a “non-diversified” investment company under the Investment Company Act of 1940, as amended, which means that the Fund may invest a higher percentage of its assets in a fewer number of issuers than is permissible for a “diversified” fund.

Simplify US Equity PLUS Bitcoin Strategy ETF

The Fund has adopted a non-fundamental policy that, under normal circumstances, the Fund will invest at least 80% of its net assets (plus any borrowings for investment purposes) in equity securities of U.S. companies, exchange-traded products with direct exposure to Bitcoin (“Bitcoin ETPs”), and exchange-traded funds with indirect exposure to Bitcoin primarily through Bitcoin futures, options, swaps, or other derivative instruments (“Bitcoin ETFs”).

US Equity Strategy

The Fund invests in equity securities of U.S. companies through (i) exchange-traded futures contracts, (ii) direct purchases of securities of U.S. companies, and (iii) ETFs that primarily invest in the equity securities of U.S. companies. The Fund defines equity securities as common stock, preferred stock. The Fund defines U.S. companies as those organized in the U.S.; having a class of securities whose principal securities market is in the U.S.; or derives 50% or more of its total revenues or earnings from goods produced, sales made, or services provided in the U.S.; or maintains 50% or more of its employees, assets, investments, operations, or other business activity in the U.S. The Fund invests in companies without restriction as to capitalization.

The adviser believes that, based upon its historical research, a base allocation to equities will make a significant contribution to long-term capital appreciation, while providing dividend income to help offset Fund operating expenses. The adviser evaluates expected return, expenses, management, and leveraging effects when initially choosing between specific stocks, ETFs, and futures and evaluates allocations among these instruments on an ongoing basis to determine whether any adjustments to the allocations would provide better expected returns. The adviser does not frequently trade US equities but seeks to maintain consistent exposure to the US equity market.

Bitcoin Strategy

The Fund targets a 10% of total assets allocation to Bitcoin ETPs and Bitcoin ETFs. The Fund generally rebalances this allocation quarterly, but will rebalance more frequently to ensure the allocation does not exceed 25% of its total assets. Bitcoin ETPs are investment vehicles that track the price of Bitcoin by directly holding actual Bitcoin (called “spot”) as their underlying asset while Bitcoin ETFs primarily invest in derivatives linked to Bitcoin to gain exposure to Bitcoin. Unlike the Bitcoin ETFs, the Bitcoin ETPs trade on a U.S.-regulated securities exchange and are not registered as investment companies under the Investment Company Act of 1940, as amended (the “1940 Act”). The Fund’s Adviser selects specific Bitcoin ETPs and Bitcoin ETFs (including affiliated Bitcoin ETFs) that it believes offer sufficient liquidity and relatively low expenses.

The Fund will not invest directly in Bitcoin, Bitcoin futures, or other crypto assets. The Fund is not expected to track the price movements of crypto assets.

Additional Information on Bitcoin

Bitcoin is a digital asset that is created and transmitted through the operations of the Bitcoin network. The ownership of Bitcoin is determined by participants in the Bitcoin network. The Bitcoin network connects computers that run publicly accessible, or “open source,” software that follows the rules and procedures governing the Bitcoin network. This is commonly referred to as the Bitcoin Protocol. Bitcoin, the asset, plays a key role in the operation of the Bitcoin network, as the computers (or “miners”) that process transactions on the network and maintain the network’s security are compensated through the issuance of new Bitcoin and through transaction fees paid by users in Bitcoin.

No single entity owns or operates the Bitcoin network. Bitcoin is not issued by any government, by banks or similar organizations. The infrastructure of the Bitcoin network is collectively maintained by a decentralized user base. The Bitcoin network is accessed through software, and software governs the creation, movement, and ownership of “Bitcoin,” the unit of account on the Bitcoin network ledger. The value of Bitcoin is determined, in part, by the supply of, and demand for, Bitcoin in the global markets for trading Bitcoin, market expectations for the adoption of Bitcoin as a decentralized store of value, the number of merchants and/or institutions that accept Bitcoin as a form of payment and the volume of private end-user-to-end-user transactions.

Bitcoin transaction and ownership records are reflected on the “Bitcoin blockchain,” which is a digital public record or ledger. Copies of this ledger are stored in a decentralized manner on the computers of each Bitcoin network node (a node is any user who maintains on their computer a full copy of all the Bitcoin transaction records, the blockchain, as well as related software). Transaction data is permanently recorded in files called “blocks,” which reflect transactions that have been recorded and authenticated by Bitcoin network participants. The Bitcoin network software source code includes protocols that govern the creation of new Bitcoin and the cryptographic system that secures and verifies Bitcoin transactions.

PRINCIPAL INVESTMENT RISKS:

All funds take investment risks. Therefore, it is possible to lose money by investing in a Fund. The principal risks that may reduce a Fund’s returns, include the following:

Simplify Bitcoin Strategy PLUS Income ETF

- Active Management Risk
- Bitcoin ETF Risk
- Bitcoin Risk
- Concentration Risk
- Early Close/Trading Halt Risk
- ETF Structure Risks
- Exchange Traded Product Risk
- Fixed Income Securities Risk
- Leverage Risk
- Market and Geopolitical Risk

- Non-Diversification Risk
- Options Risk
- Reverse Repurchase Agreements Risk
- TIPS Risk
- U.S. Treasury Market Risk
- Underlying Fund Risk
- Valuation Risk
- Wholly-Owned Subsidiary Risk

Simplify US Equity PLUS Bitcoin Strategy ETF

- Active Management Risk
- Affiliated ETF Conflict of Interest Risk
- Bitcoin ETF Risk
- Bitcoin Risk
- Derivatives Risk
- Early Close/Trading Halt Risk
- Equity Securities Risk
- ETF Structure Risks
- Exchange Traded Product Risk
- Futures Contract Risk
- Leverage Risk
- Market and Geopolitical Risk
- Over-the-Counter Market Risk
- Small and Medium Capitalization Risk
- Underlying Fund Risk
- Valuation Risk

The following describes the risks noted above with respect to a Fund's investments.

Active Management Risk. Each Fund is subject to the risk that its investment management strategy may not produce the intended results. There can be no assurance that the securities selected by the adviser will produce positive returns.

Affiliated ETF Conflict of Interest Risk. Because the Fund may invest in affiliated ETFs, the adviser is subject to conflicts of interest in allocating the Fund's assets among the affiliated ETFs. The adviser will receive more revenue to the extent it selects affiliated ETFs rather than an unaffiliated fund for inclusion in the Fund's portfolio. In addition, the adviser may have an incentive to allocate the Fund's assets to those affiliated ETFs for which the net advisory fees payable to the adviser are higher than the fees payable by other affiliated ETFs.

Bitcoin ETF Risks. **The Bitcoin ETFs do not invest directly in Bitcoin.** Instead, the Bitcoin ETFs obtain indirect exposure to Bitcoin by investing in Bitcoin futures, swaps, and/or options. The market for derivatives linked to Bitcoin may be less developed, and potentially less liquid and more volatile, than more established markets. While these markets have grown substantially since Bitcoin derivatives commenced trading, there can be no assurance that this growth will continue. The price for Bitcoin futures, swaps, and options is based on a number of factors, including the supply of and the demand for these derivatives. Market conditions and expectations, position limits, accountability levels, collateral requirements, availability of counterparties, and other factors each can impact the supply of and demand for these derivatives. Additionally, due to the high margin requirements that are unique to Bitcoin futures contracts, the Bitcoin ETFs may experience difficulty maintaining the desired level of exposure to Bitcoin solely through futures contracts. If a Bitcoin ETF is unable to achieve such exposure it may not be able to meet its investment objective and the Bitcoin ETF's returns may be different or lower than expected. Additionally, collateral requirements may require the Bitcoin ETFs to liquidate their positions, potentially incurring losses and expenses, when it otherwise would not do so. Investing in derivatives like Bitcoin futures may be considered aggressive and may expose the Bitcoin ETFs to significant risks. These risks include counterparty risk and liquidity risk.

Bitcoin Risk. The value of the Fund's investment in Bitcoin ETPs and Bitcoin ETFs are subject to fluctuations in the value of Bitcoin. Bitcoin is a relatively new innovation and the market for Bitcoin is subject to rapid price swings, changes and uncertainty. The further development of the Bitcoin network and the acceptance and use of Bitcoin are subject to a variety of factors that are difficult to evaluate. The value of Bitcoin has been, and may continue to be, substantially dependent on speculation, such that trading and investing in these assets generally may not be based on fundamental analysis. The slowing, stopping or reversing of the development of the Bitcoin network or the acceptance of Bitcoin may adversely affect the price of Bitcoin. Bitcoin is subject to the risk of fraud, theft, manipulation or security failures, operational or other problems that impact the digital asset trading venues on which Bitcoin trades. The Bitcoin blockchain may contain flaws that can be exploited by hackers. A significant portion of Bitcoin is held by a small number of holders sometimes referred to as "whales." Transactions of these holders may influence the price of Bitcoin.

Unlike the exchanges for more traditional assets, such as equity securities and futures contracts, Bitcoin and the digital asset trading venues on which it trades are largely unregulated and highly fragmented and digital asset trading venues may be operating out of compliance with regulations. As a result of the lack of regulation, individuals or groups may engage in fraud or market manipulation (including using social media to promote Bitcoin in a way that artificially increases the price of Bitcoin). Investors may be more exposed to the risk of theft, fraud and market manipulation than when investing in more traditional asset classes. Over the past several years, a number of digital asset trading venues have been closed due to fraud, failure or security breaches. Investors in Bitcoin may have little or no recourse should such theft, fraud or manipulation occur and could suffer significant losses. Legal or regulatory changes may negatively impact the operation of the Bitcoin network or restrict the use of Bitcoin. The Bitcoin ETPs and Bitcoin ETFs may also be negatively impacted by regulatory enforcement actions against the digital asset trading venues upon which Bitcoin trades. Such actions could significantly reduce the number of venues upon which Bitcoin trades and could negatively impact the Bitcoin held by the Bitcoin ETPs and Bitcoin futures contracts held by the Bitcoin ETFs. In addition, digital asset trading venues, Bitcoin miners, and other participants may have significant exposure to other digital assets. Instability in the price, availability or legal or regulatory status of those instruments may adversely impact the operation of the digital asset trading venues and the Bitcoin network. The realization of any of these risks could result in a decline in the acceptance of Bitcoin and consequently a reduction in the value of Bitcoin, Bitcoin futures contracts, and shares of the Bitcoin ETPs and Bitcoin ETFs. Such occurrences could also impair the Bitcoin ETPs' and Bitcoin ETFs' ability to meet their investment objective pursuant to their respective investment strategy.

The Bitcoin network is maintained and secured by a group of validators who “mine” Bitcoin, which involves contributing computer power to the network to validate transactions, maintain security and finalize settlement. The Bitcoin blockchain relies on a consensus mechanism whereby miners agree on the accurate state of the database. If a malicious actor (or group of actors) were to gain control of more than 50% the mining (or “hash”) power in the network, even temporarily, they would have the ability to block new transactions from being confirmed and could, over time, reverse or reorder prior transactions. Although it may be challenging for a malicious actor (or group of actors) to gain control of 50% of the mining (or “hash”) power in the Bitcoin blockchain, such an attack would significantly impact the value of Bitcoin, and thereby of the Bitcoin held by the Bitcoin ETPs and Bitcoin futures contracts held by the Bitcoin ETFs.

A blockchain is a public database that is updated, shared and maintained across many computers in a network. The software that powers a blockchain is known as its protocol. Like all software, these protocols may update or change from time-to-time. In the case of the Bitcoin protocol, updates are made based on proposals submitted by developers, but only if a majority of the users and miners adopt the new proposals and update their individual copies of the protocol. Certain upgrade proposals to a blockchain may not be accepted by all the participants in an ecosystem. If one significant group adopts a proposed upgrade and another does not – or if groups adopt different upgrades – this can result in a “fork” of the blockchain, wherein two distinct sets of users and validators or users and miners run two different versions of a protocol. If the versions are sufficiently different such that the two versions of the protocol cannot simultaneously maintain and update a shared record of the blockchain database, it is called a “hard fork.” A hard fork can result in the creation of two competing blockchains, each with its own native crypto assets. For instance, on August 1, 2017, two factions in the Bitcoin community could not agree on whether or not to adopt an upgrade to the Bitcoin protocol related to how to scale throughput on the blockchain. The disagreement created a fork, with the smaller group taking the name “Bitcoin Cash” and running its own blockchain and related native crypto asset. The larger group retained the name Bitcoin for its blockchain and held Bitcoin as the native crypto asset. Additional forks of the Bitcoin blockchain are possible. A large-scale fork could introduce risk, uncertainty, or confusion into the Bitcoin blockchain, or could fraction the value of the main blockchain and its native crypto asset, which could significantly impact the value of Bitcoin, and thereby of the Bitcoin held by the Bitcoin ETPs and Bitcoin futures contracts held by the Bitcoin ETFs. Additionally, a hack of the Bitcoin blockchain or one or more projects that interact with or that are built on top of the Bitcoin blockchain could negatively impact the price of Bitcoin, whether it leads to another hard fork or not, and thereby the value of the Bitcoin held by the Bitcoin ETPs and Bitcoin futures contracts held by the Bitcoin ETFs.

The Bitcoin blockchain and its native crypto asset, Bitcoin, face numerous challenges to gaining widespread adoption as an alternative payments system, including the slowness of transaction processing and finality, variability in transaction fees and volatility in Bitcoin’s price. It is not clear that the Bitcoin blockchain or Bitcoin can overcome these and other impediments, which could harm the long-term adoption of the Bitcoin blockchain and Bitcoin as an alternative payment system, and thereby negatively impact the price of Bitcoin. In addition, alternative public blockchains have been developed and may in the future develop that compete with the Bitcoin blockchain and may have significant advantages as alternative payment systems, including higher throughput, lower fees, faster settlement and finalization, and the ability to facilitate untraceable and/or privacy-shielded transactions through the use of zero-knowledge cryptography or other means. It is possible that these alternative public blockchains and their native crypto assets may be more successful than the Bitcoin blockchain and Bitcoin in gaining adoption as an alternative payments system, which could limit the long-term adoption of the Bitcoin blockchain and Bitcoin, thereby negatively impact the price of Bitcoin. Such alternative public blockchains, such as the Ethereum network, allow users to write and implement smart contracts—that is, general-purpose code that executes on every computer in the network and can instruct the transmission of information and value based on a sophisticated set of logical conditions. Using smart contracts, users can create markets, store registries of debts or promises, represent the ownership of property, move funds in accordance with conditional instructions and create other digital assets. Furthermore, traditional payment systems may improve their own technical capabilities and offer faster settlement times, faster finalization and lower fees. This could make it more difficult for the Bitcoin blockchain and Bitcoin to gain traction as an alternative payments system, which could limit the long-term adoption of the Bitcoin blockchain and Bitcoin, and thereby negatively impact the price of Bitcoin. Finally, one means by which the ecosystem surrounding the Bitcoin blockchain has attempted to mitigate concerns about the slowness of transaction processing and finality and the variability of transaction fees has been through the development of so-called Layer 2 networks, including the “Lightning Network.” Layer 2 networks are separate blockchains built on top of “Layer 1” blockchains like the Bitcoin blockchain for the purpose of augmenting the throughput of the Layer 1 blockchain, and often, providing lower fees for transaction processing and faster settlement. Layer 2 blockchains introduce certain risks into the Bitcoin ecosystem that should be considered. For instance, Layer 2 blockchains are a relatively new and still developing technology. Technological issues – including hacks, bugs, or failures – could introduce risk or harm confidence in the Bitcoin ecosystem,

which could negatively impact the price of Bitcoin. In addition, users may choose to settle an increasing share of transactions on Layer 2 blockchains, which could negatively impact the transaction activity on, and the amount of fee revenue generated by, the Bitcoin blockchain itself, which could negatively impact the price of Bitcoin. If these or other developments negatively impact the price of Bitcoin, this would negatively impact the value of the Bitcoin held by the Bitcoin ETPs and Bitcoin futures contracts held by the Bitcoin ETFs.

The realization of any of these risks could result in a decline in the acceptance of Bitcoin and consequently a reduction in the value of Bitcoin, Bitcoin ETPs, Bitcoin ETFs and the Fund.

Bitcoin Tax Risk (SPBC and MAXI). The Fund's investments in Bitcoin ETPs or similar investment vehicles are grantor trusts for U.S. federal income tax purposes, and therefore an investment by the Fund directly in such an investment will generally be treated as a direct investment in Bitcoin for such purposes. In order to qualify for the special tax treatment accorded a regulated investment company ("RIC") and its shareholders, Subchapter M of the Internal Revenue Code of 1986, as amended (the "Code") requires, among other things, that at least 90% of the Fund's income be derived from securities or derived with respect to its business of investing in securities (typically referred to as "qualifying income"). Although the income from Bitcoin ETPs in which the Fund invests is not treated as "qualifying income" for purposes of the 90% income requirement, the Fund avoids the recognition of any income from Bitcoin ETPs by handling any Bitcoin ETP transactions with Authorized Participants ("AP") through in-kind creations and redemptions. For example, if the Fund wants to reduce its exposure to Bitcoin ETPs, it may deliver a basket of the Bitcoin ETPs to the AP in exchange for shares of the Fund. The Bitcoin ETP is not sold by the Fund and thus, no income is generated for the Fund. Additional risks with respect to APs are described under the "Authorized Participant Risk" below.

If, in any year, the Fund was to fail to qualify for the special tax treatment accorded a RIC and its shareholders and was ineligible to or was not able to cure such failure, the Fund would be taxed in the same manner as an ordinary corporation subject to U.S. federal income tax on all its income at the fund level. The resulting taxes could substantially reduce the Fund's net assets and the amount of income available for distribution. In addition, in order to requalify for taxation as a RIC, the Fund could be required to recognize unrealized gains, pay substantial taxes and interest, and make certain distributions.

Bitcoin Tax Risk (MAXI). By investing in Bitcoin futures indirectly through the Subsidiary, the Fund will obtain exposure to the Bitcoin within the federal tax requirements that apply to the Fund. However, because the Subsidiary is a controlled foreign corporation, any income received by the Fund from its investments in the Subsidiary will be passed through to the Fund as ordinary income, which may be taxed at less favorable rates than capital gains.

Bitcoin Futures Contract Risk (MAXI). The market for Bitcoin futures may be less developed, and potentially less liquid and more volatile, than more established futures markets as Bitcoin futures are relatively new. The successful use of futures contracts draws upon the adviser's skill and experience with respect to such instruments and are subject to special risk considerations. The primary risks associated with the use of futures contracts are (a) the imperfect correlation between the change in market value of the reference asset and the price of the futures contract; (b) possible lack of a liquid secondary market and the resulting inability to close a futures contract when desired; (c) investments in futures contracts involves leverage, which means a small percentage of assets in futures can have a disproportionately large impact on the Fund and the Fund can lose more than the principal amount invested; (d) losses caused by unanticipated market movements, which are potentially unlimited; (e) if the Fund has insufficient cash, it may have to sell securities from its portfolio to meet daily variation margin requirements, and the Fund may have to sell securities at a time when it may be disadvantageous to do so. Bitcoin futures may trade at a price premium above Bitcoin. As a futures contract approaches expiration, the price premium will tend to erode, which will result in losses to the Fund assuming other things equal.

Concentration Risk. Concentration risk is the possibility that securities within the same industry will decline in price due to industry-specific market or economic developments. If the Fund invests more heavily in a particular industry, the value of its shares may be especially sensitive to factors and economic risks that specifically affect that industry. As a result, the Fund's share price may fluctuate more widely than the value of shares of a mutual fund that invests in a broader range of industries. Additionally, some industries could be subject to greater government regulation than other industries. Therefore, changes in regulatory policies for those sectors may have a material effect on the value of securities issued by companies in those industries.

Derivatives Risk. A Fund's use of derivative instruments involves risks different from, or possibly greater than, the risks associated with investing directly in securities and other traditional investments. These risks include (i) the risk that the counterparty to a derivative transaction may not fulfill its contractual obligations; (ii) risk of mispricing or improper valuation; and (iii) the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, rate or index. Derivative prices are highly volatile and may fluctuate substantially during a short period of time. Such prices are influenced by numerous factors that affect the markets, including, but not limited to: changing supply and demand relationships; government programs and policies; national and international political and economic events, changes in interest rates, inflation and deflation and changes in supply and demand relationships. Trading derivative instruments involves risks different from, or possibly greater than, the risks associated with investing directly in securities.

Early Close/Trading Halt Risk. An exchange or market may close or issue trading halts on specific securities, or the ability to buy or sell certain securities or financial instruments may be restricted, which may prevent a Fund from buying or selling certain securities or financial instruments. In these circumstances, a Fund may be unable to rebalance its portfolio, may be unable to accurately price its investments and may incur substantial trading losses.

Equity Securities Risk. Equity securities are susceptible to general stock market fluctuations and to volatile increases and decreases in value. The equity securities held by a Fund may experience sudden, unpredictable drops in value or long periods of decline in value. This may occur because of factors affecting securities markets generally, the equity securities of a particular sector, or a particular company.

ETF Structure Risks: Each Fund is structured as an ETF and will invest in underlying ETFs. As a result, each Fund is subject to special risks, including:

- *Not Individually Redeemable.* A Fund's Shares ("Shares") are not redeemable by retail investors and may be redeemed only by the Authorized Participant at net asset value ("NAV") and only in Creation Units. A retail investor generally incurs brokerage costs when selling shares.
- *Trading Issues.* Trading in Shares on the Exchange may be halted due to market conditions or for reasons that, in the view of the Exchange, make trading in Shares inadvisable, such as extraordinary market volatility. There can be no assurance that Shares will continue to meet the listing requirements of the Exchange, which may result in a Fund's shares being delisted. An active trading market for the Shares may not be developed or maintained. If the Shares are traded outside a collateralized settlement system, the number of financial institutions that can act as Authorized Participants that can post collateral on an agency basis is limited, which may limit the market for the Shares.
- *Market Price Variance Risk.* Individual Shares of a Fund that are listed for trading on the Exchange can be bought and sold in the secondary market at market prices. The market prices of Shares will fluctuate in response to changes in NAV and supply and demand for Shares. There may be times when the market price and the NAV vary significantly and you may pay more than NAV when buying Shares on the secondary market, and you may receive less than NAV when you sell those Shares. The market price of Shares, like the price of any exchange-traded security, includes a "bid-ask spread" charged by the exchange specialists, market makers or other participants that trade the particular security. In times of severe market disruption, the bid-ask spread often increases significantly. This means that Shares may trade at a discount to NAV and the discount is likely to be greatest when the price of Shares is falling fastest, which may be the time that you most want to sell your Shares. A Fund's investment results are measured based upon the daily NAV of a Fund over a period of time. Investors purchasing and selling Shares in the secondary market may not experience investment results consistent with those experienced by those Authorized Participants creating and redeeming directly with a Fund.
 - In times of market stress, market makers may step away from their role market making in shares of ETFs and in executing trades, which can lead to differences between the market value of Shares and the Fund's NAV.
 - The market price for the Shares may deviate from a Fund's NAV, particularly during times of market stress, with the result that investors may pay significantly more or significantly less for Shares than a Fund's NAV, which is reflected in the bid and ask price for Fund shares or in the closing price.

- In stressed market conditions, the market for the Shares may become less liquid in response to the deteriorating liquidity of a Fund's portfolio. This adverse effect on the liquidity of the Shares may, in turn, lead to differences between the market value of the Shares and a Fund's NAV.
- *Authorized Participant Risk.* Only an Authorized Participant may engage in creation or redemption transactions directly with a Fund. A Fund has a limited number of institutions that may act as an Authorized Participant on an agency basis (*i.e.*, on behalf of other market participants). To the extent that Authorized Participants exit the business or are unable to proceed with creation or redemption orders with respect to a Fund and no other Authorized Participant is able to step forward to create or redeem Creation Units, a Fund's shares may be more likely to trade at a premium or discount to NAV and possibly face trading halts or delisting. Authorized Participant concentration risk may be heightened for securities or instruments that have lower trading volumes.

Exchange Traded Product (ETP) Risk. The Fund invests in Bitcoin ETPs. Through its positions in Bitcoin ETPs, the Fund generally will be subject to the risks associated with such vehicle's investments, including the possibility that the value of the securities or instruments held by or linked to a Bitcoin ETP could decrease. The Bitcoin ETPs in which the Fund invests are not registered, nor are they required to be registered, as investment companies subject to the 1940 Act and, therefore, are not subject to the regulatory scheme of the 1940 Act including: provisions preventing Bitcoin ETP insiders from managing a Spot Bitcoin ETP to their benefit and to the detriment of shareholders; provisions preventing a Bitcoin ETP from issuing securities having inequitable or discriminatory provisions; provisions preventing management by irresponsible persons; provisions preventing the use of unsound or misleading methods of computing Bitcoin ETP earnings and asset value; provisions prohibiting suspension of redemptions (except under limited circumstances); provisions limiting fund leverage; provisions imposing a fiduciary duty on fund managers with respect to receipt of compensation for services; and provisions preventing changes in a Bitcoin ETP's character without the consent of shareholders. When the Fund invests in a Bitcoin ETP, in addition to directly bearing the expenses associated with its own operations, it also will bear a pro rata portion of the Bitcoin ETP's expenses (including operating costs and management fees).

Fixed Income Securities Risk. Fixed income securities risk factors include credit risk (the debtor may default) and prepayment risk (the debtor may pay its obligation early or later than expected, potentially reducing the amount of interest payments or extending time to principal repayment). These risks could affect the value of a particular investment possibly causing the Fund's share price and total return to be reduced and fluctuate more than other types of investments. When a Fund invests in fixed income securities the value of your investment in a Fund will fluctuate with changes in interest rates. Typically, a rise in interest rates causes a decline in the value of fixed income securities. In general, the market price of debt securities with longer maturities will increase or decrease more in response to changes in interest rates than shorter-term securities. If the U.S. Federal Reserve's Federal Open Market Committee ("FOMC") raises the federal funds interest rate target, interest rates across the U.S. financial system may rise. However, the magnitude of rate changes across maturities and borrower sectors is uncertain. Rising rates may decrease liquidity and increase volatility, which may make portfolio management more difficult and costly to a Fund and its shareholders. Additionally, default risk increases if issuers must borrow at higher rates. Generally, these changing market conditions may cause a Fund's share price to fluctuate or decline more than other types of equity investments.

Futures Contract Risk. The successful use of futures contracts draws upon an adviser's skill and experience with respect to such instruments and are subject to special risk considerations. The primary risks associated with the use of futures contracts are (a) the imperfect correlation between the change in market value of the instruments held by a Fund and the price of the forward or futures contract; (b) possible lack of a liquid secondary market for a forward or futures contract and the resulting inability to close a forward or futures contract when desired; (c) investments in futures contracts involves leverage, which means a small percentage of assets in futures can have a disproportionately large impact on a Fund and a Fund can lose more than the principal amount invested; (d) losses caused by unanticipated market movements, which are potentially unlimited; (e) the Adviser's inability to predict correctly the direction of securities prices, interest rates, currency exchange rates and other economic factors; (f) the possibility that the counterparty will default in the performance of its obligations; and (g) if a Fund has insufficient cash, it may have to sell securities from its portfolio to meet daily variation margin requirements, and a Fund may have to sell securities at a time when it may be disadvantageous to do so.

Leverage Risk. Using derivatives can create leverage, which can amplify the effects of market volatility on each Fund's share price and make a Fund's returns more volatile. The use of leverage may cause a Fund to liquidate portfolio positions when it would not be advantageous to do so in order to satisfy its obligations. The use of leverage may also cause a Fund to have higher expenses than those of other funds that do not use such techniques.

Market and Geopolitical Risk. The increasing interconnectivity between global economies and financial markets increases the likelihood that events or conditions in one region or financial market may adversely impact issuers in a different country, region or financial market. Securities in a Fund's portfolio may underperform due to inflation (or expectations for inflation), interest rates, global demand for particular products or resources, natural disasters, climate change and climate-related events, pandemics, epidemics, terrorism, international conflicts, regulatory events and governmental or quasi-governmental actions. The occurrence of global events similar to those in recent years may result in market volatility and may have long term effects on both the U.S. and global financial markets. It is difficult to predict when similar events affecting the U.S. or global financial markets may occur, the effects that such events may have and the duration of those effects. Any such event(s) could have a significant adverse impact on the value and risk profile of the Fund's portfolio. The novel coronavirus (COVID-19) global pandemic and the aggressive responses taken by many governments, including closing borders, restricting international and domestic travel, and the imposition of prolonged quarantines or similar restrictions, as well as the forced or voluntary closure of, or operational changes to, many retail and other businesses had negative impacts, and in many cases severe negative impacts, on markets worldwide. It is not known how long such impacts, or any future impacts of other significant events described above, will or would last, but there could be a prolonged period of global economic slowdown, which may impact your investment. Therefore, the Fund could lose money over short periods due to short-term market movements and over longer periods during more prolonged market downturns. During a general market downturn, multiple asset classes may be negatively affected. Changes in market conditions and interest rates can have the same impact on all types of securities and instruments. In times of severe market disruptions, you could lose your entire investment.

Non-Diversified Fund Risk. Because the Fund is non-diversified and may invest a greater portion of its assets in fewer issuers than a diversified fund, changes in the market value of a single portfolio holding could cause greater fluctuations in the Fund's share price than would occur in a diversified fund. This may increase the Fund's volatility and cause the performance of a single portfolio holding or a relatively small number of portfolio holdings to have a greater impact on the Fund's performance.

Options Risk. The Funds may purchase and/or write call and put options on securities in which they invest. A Fund may engage in these transactions to hedge against a decline in the value of securities owned or an increase in the price of securities which a Fund plans to purchase.

- *Put Options.* As a seller (writer) of a put option, the Fund will tend to lose money if the value of the reference index or security falls below the strike price and the buyer exercises the option. When a Fund purchases a put option, it receives, in return for the premium it pays, the right to sell to the writer of the option the underlying security at a specified price at any time before the option expires. A Fund purchases put options in anticipation of a decline in the market value of the underlying security. During the life of the put option, a Fund is able to sell the underlying security at the exercise price regardless of any decline in the market price of the underlying security. In order for a put option to result in a gain, the market price of the underlying security must decline, during the option period, below the exercise price enough to cover the premium and transaction costs.

Put Spread Risk. Put spreads provide only limited protection when there are significant market declines. The Fund will not be protected beyond the strike price of the written leg of the put spread.

- *Call Options.* As the seller (writer) of a call option, the Fund will tend to lose money if the value of the reference index or security rises above the strike price. When a Fund purchases a call option, it receives, in return for the premium it pays, the right to buy from the writer of the option the underlying security at a specified price at any time before the option expires. A Fund purchases call options in anticipation of an increase in the market value of securities that it intends ultimately to buy. During the life of the call option, a Fund is able to buy the underlying security at the exercise price regardless of any increase in the market price of the underlying security. In order for a call option to result in a gain, the market price of the underlying security must exceed the sum of the exercise price, the premium paid, and transaction costs.

Call Spread Risk. Call spreads will limit the Fund's participation in significant market gains. A Fund will not participate in gains beyond the strike price of the written leg of the call spread.

Over-the-Counter Market Risk. Securities and options traded in over-the-counter markets may trade less frequently and in limited volumes and thus exhibit more volatility and liquidity risk, and the prices paid by a Fund in over-the-counter transactions may include an undisclosed dealer markup. Each Fund is also exposed to default by the over-the-counter option writer who may be unwilling or unable to perform its contractual obligations to a Fund.

Reverse Repurchase Agreement Risk. Reverse repurchase agreements involve the sale of securities held by the Fund with an agreement to repurchase the securities at an agreed-upon price, date and interest payment, and involve the risk that the other party may fail to return the securities in a timely manner, or at all, resulting in losses to the Fund.

Small and Medium Capitalization Risk. The stocks of small and medium capitalization companies involve substantial risk. These companies may have limited product lines, markets or financial resources, and they may be dependent on a limited management group. Stocks of these companies may be subject to more abrupt or erratic market movements than those of larger, more established companies or the market averages in general.

TIPS Risk. TIPS are debt instruments issued by the United States Department of the Treasury. The principal of TIPS increases with inflation and decreases with deflation, as measured by the Consumer Price Index. When TIPS mature, investors are paid the adjusted principal or original principal, whichever is greater. Interest payments on TIPS are unpredictable and will fluctuate as the principal and corresponding interest payments are adjusted for inflation. Inflation-indexed bonds generally pay a lower nominal interest rate than a comparable non-inflation-indexed bond. There can be no assurance that the CPI will accurately measure the real rate of inflation in the prices of goods and services. Any increases in the principal amount of TIPS will be considered taxable ordinary income, even though the Fund or applicable underlying ETF will not receive the principal until maturity. As a result, the Fund may make income distributions to shareholders that exceed the cash it receives. In addition, TIPS are subject to credit risk, interest rate risk, and maturity risk.

Underlying Fund Risk. ETFs and ETPs (“Underlying Funds”) in which a Fund invests are subject to investment advisory and other expenses, which will be indirectly paid by the Fund. As a result, the cost of investing in a Fund will be higher than the cost of investing directly in the Underlying Funds and may be higher than other funds that invest directly in stocks and bonds. Each of the Underlying Funds is subject to its own specific risks, but the adviser expects the principal investments risks of such funds will be similar to the risks of investing in the applicable Fund.

U.S. Treasury Market Risk. The U.S. Treasury market can be volatile, and the value of instruments correlated with these markets may fluctuate dramatically from day to day. U.S. Treasury obligations may provide relatively lower returns than those of other securities. Similar to other debt instruments, U.S. Treasury obligations are subject to debt instrument risk and interest rate risk. In addition, changes to the financial condition or credit rating of the U.S. Government may cause the value of U.S. Treasury obligations to decline.

Valuation Risk. The sales price the Fund could receive for any particular portfolio investment may differ from the Fund’s valuation of the investment, particularly for securities or other investments, such as Bitcoin, that trade in thin or volatile markets or that are valued using a fair value methodology. Valuation may be more difficult in times of market turmoil since many investors and market makers may be reluctant to purchase complex instruments or quote prices for them. The Fund’s ability to value its investments may be impacted by technological issues and/or errors by pricing services or other third party service providers. Shares of the Bitcoin ETPs are intended to reflect the price of Bitcoin assets, less fees and expenses. The price of a Bitcoin ETP may go down even if the price of the underlying asset, Bitcoin, remains unchanged. Additionally, shares that trade at a premium mean that an investor who purchases \$1 of a portfolio will actually own less than \$1 in assets.

Wholly-Owned Subsidiary Risk. Changes in the laws of the United States and/or the Cayman Islands, under which the Fund and the Subsidiary, respectively, are organized, could result in the inability of the Fund and/or Subsidiary to operate as described in this Prospectus and could negatively affect the Fund and its shareholders. The Subsidiary is not registered under the 1940 Act and is not subject to all the investor protections of the 1940 Act. Thus, the Fund, as an investor in the Subsidiary, will not have all the protections offered to investors in registered investment companies

PORTFOLIO HOLDINGS DISCLOSURE:

A description of the Funds' policies and procedures regarding the release of portfolio holdings information is available in the Funds' Statement of Additional Information ("SAI").

SUBSIDIARY (BITCOIN STRATEGY PLUS INCOME ETF ONLY):

The Bitcoin Strategy PLUS Income ETF executes a portion of its Bitcoin strategy by investing up to 25% of its total assets in a wholly-owned and controlled subsidiary (the "Subsidiary"). The Subsidiary invests the majority of its assets in Bitcoin futures, Bitcoin swaps, Bitcoin ETP swaps, options on Bitcoin, Bitcoin futures, Bitcoin ETPs, and an index of Bitcoin ETPs, but may also invest in commodities and volatility indices subject to the same investment restrictions as the Fund, when viewed on a consolidated basis. The principal investment strategies and principal investment risks of a Subsidiary are also principal investment strategies and principal risks of the Fund and are reflected in this Prospectus. The financial statements of a Subsidiary are consolidated with those of the Fund. By investing in instruments linked to Bitcoin, commodities, and volatility indices indirectly through the Subsidiary, the Fund obtains exposure to these markets within the federal tax requirements that apply to the Fund. Specifically, a Subsidiary provides the Fund with exposure within the limitations of the federal tax requirements of Subchapter M of the Internal Revenue Code of 1986, as amended (the "Code"). Sub-chapter M requires, among other things, that at least 90% of the Fund's income be derived from securities or derived with respect to its business of investing in securities (typically referred to as "qualifying income"). The Fund will make investments in certain instruments linked to Bitcoin, commodities, and volatility indices through the Subsidiary because income from these derivatives and options is not treated as "qualifying income" for purposes of the 90% income requirement if the Fund invests in the derivative directly. The Internal Revenue Service has issued a number of private letter rulings to other mutual funds (unrelated to the Fund), which indicate that certain income from a fund's investment in a wholly-owned foreign subsidiary will constitute "qualifying income" for purposes of Subchapter M. The Fund does not have a private letter ruling. To satisfy the 90% income requirement, the Subsidiary will, no less than annually, declare and distribute a dividend to the Fund, as the sole shareholder of the Subsidiary, in an amount approximately equal to the total amount of "Subpart F" income (as defined in Section 951 of the Code) generated by or expected to be generated by the Subsidiary's investments during the fiscal year. Such dividend distributions are "qualifying income" pursuant to Subchapter M (Section 851(b)) of the Code.

Because the Fund may invest a substantial portion of its assets in the Subsidiary, which may hold some of the investments described in this Prospectus, the Fund may be considered to be investing indirectly in some of those investments through its Subsidiary. For that reason, references to the Fund may also include a Subsidiary.

The Subsidiary follows the same compliance policies and procedures, as its corresponding Fund and is subject to the same investment restrictions and limitations as the Fund when measured on a consolidated basis with the Fund. The Fund complies with the provisions of the 1940 Act governing investment policies, capital structure and leverage on an aggregate basis with the Subsidiary. In addition, the Subsidiary complies with the provisions of the 1940 Act relating to affiliated transactions and custody. The Fund's custodian also serves as the custodian to each Subsidiary.

The adviser to the Subsidiary also complies with the provisions of the 1940 Act regarding investment advisory contracts and is considered to be an investment adviser to a fund under the 1940 Act.

CYBERSECURITY: The computer systems, networks and devices used by the Funds and their service providers to carry out routine business operations employ a variety of protections designed to prevent damage or interruption from computer viruses, network failures, computer and telecommunication failures, infiltration by unauthorized persons and security breaches. Despite the various protections utilized by the Funds and their service providers, systems, networks, or devices potentially can be breached. Each Fund and its shareholders could be negatively impacted as a result of a cybersecurity breach.

Cybersecurity breaches can include unauthorized access to systems, networks, or devices; infection from computer viruses or other malicious software code; and attacks that shut down, disable, slow, or otherwise disrupt operations, business processes, or website access or functionality. Cybersecurity breaches may cause disruptions and impact each Fund’s business operations, potentially resulting in financial losses; interference with each Fund’s ability to calculate its NAV; impediments to trading; the inability of each Fund, the adviser, and other service providers to transact business; violations of applicable privacy and other laws; regulatory fines, penalties, reputational damage, reimbursement or other compensation costs, or additional compliance costs; as well as the inadvertent release of confidential information.

Similar adverse consequences could result from cybersecurity breaches affecting issuers of securities in which the Funds invest; counterparties with which the Funds engage in transactions; governmental and other regulatory authorities; exchange and other financial market operators, banks, brokers, dealers, insurance companies, and other financial institutions (including financial intermediaries and service providers for a Fund’s shareholders); and other parties. In addition, substantial costs may be incurred by these entities in order to prevent any cybersecurity breaches in the future.

MANAGEMENT

INVESTMENT ADVISER: Simplify Asset Management Inc., located at 10845 Griffith Peak Drive, 2/F, Las Vegas, NV 89135, serves as each Fund’s investment adviser (the “Adviser”). The Adviser is registered with the SEC as an investment adviser under the Investment Advisers Act of 1940, as amended, and manages only the Funds.

Subject to the oversight of the Board of Trustees, the Adviser is responsible for managing the Fund’s investments, placing trade orders and providing related administrative services and facilities under an advisory agreement between each Fund and the Adviser.

The Adviser is paid a monthly management fee at an annual rate (stated as a percentage of the average daily net assets of the Fund) as stated below. The management agreement between the Funds and the Adviser provides that the Adviser will pay substantially all operating expenses of the Fund, excluding interest expenses, taxes, brokerage expenses, future Rule 12b-1 fees (if any), acquired fund fees and expenses, expenses incidental to a meeting of a Fund’s shareholders and the management fee. In addition to the excluded operating expenses, the Funds also pay non-operating expenses such as litigation and indemnification expenses and other expenses determined to be extraordinary by the Trust.

A discussion regarding the basis for the Board of Trustees’ approval of the Adviser’s management agreement with respect to SPBC is available in the Funds’ semi-annual report to shareholders for the six-month period ended December 31, 2023 and with respect to MAXI is available in the Funds’ semi-annual report to shareholders for the 6-month period ended December 31, 2022.

Fund	Management Fee	Actual Fee Paid During Last Fiscal Year (After Waiver)
MAXI	0.85%	0.85%
SPBC	0.50%	0.50%

MANAGER-OF-MANAGERS EXEMPTIVE ORDER

The Trust and the Adviser have received an exemptive order from the SEC that permits the Adviser, subject to approval by the Board, to enter into sub-advisory agreements with one or more sub-advisers without obtaining shareholder approval. The exemptive order permits the Adviser, subject to the approval of the Board, to replace sub-advisers or amend sub-advisory agreements, including fees, without shareholder approval whenever the Adviser and the Board believe such action will benefit the Fund and its shareholders. The Adviser, subject to the oversight of the Board, is responsible for overseeing a Fund's sub-adviser(s) and recommending their hiring, termination and replacement.

PORTFOLIO MANAGERS

David Berns, PhD, is the chief investment officer and co-founder of the Adviser. Prior to co-founding the Adviser in 2020, he founded Portfolio Designer, LLC, a company that specializes in portfolio design and from 2018 to 2019 was a managing director at Nasdaq Dorsey Wright. Prior to joining Nasdaq Dorsey Wright, Inc., he founded and developed a company that specializes in proprietary trading. He has specialized in developing asset allocation, portfolio management, and risk management systems for managing private and institutional wealth. Dr. Berns has a PhD in Physics from the Massachusetts Institute of Technology in the field of Quantum Computation.

Jeff Schwarte is the Chief Equity Strategist at Simplify Asset Management, focusing on product innovation, thought leadership, and portfolio management. Before joining Simplify, he led Principal's global systematic solutions team, overseeing model development and risk management analytics. Jeff managed several custom US, international, and global strategies and has been with Principal since 1993, serving in various roles, including portfolio manager, investment accountant, and auditor. He holds a bachelor's degree in accounting from the University of Northern Iowa and is a CFA charterholder, CPA, and Certified Internal Auditor.

Emilio Freire serves as Portfolio Manager at the Adviser and has been with the firm since its inception. Mr. Freire has primarily acted as a quantitative strategist for the Adviser, where he has been focused on building systematic option-based strategies. Mr. Freire also contributes regularly to modeling and risk management tools for the Adviser.

The SAI provides additional information about the Portfolio Managers' compensation, other accounts managed and ownership of Fund shares.

HOW SHARES ARE PRICED

The NAV of each Fund is determined at the close of regular trading (normally 4:00 p.m. Eastern Time) on each day the Exchange is open for business. NAV is computed by determining, the aggregate market value of all assets of the applicable Fund, less its liabilities, divided by the total number of shares outstanding ((assets-liabilities)/number of shares = NAV). The Exchange is closed on weekends and New Year's Day, Martin Luther King, Jr. Day, Presidents' Day, Good Friday, Memorial Day, Juneteenth Day, Independence Day, Labor Day, Thanksgiving Day and Christmas Day ("Exchange Close"). The NAV takes into account, the expenses and fees of each Fund, including management, administration, and distribution fees, which are accrued daily. The determination of NAV for each Fund for a particular day is applicable to all applications for the purchase of shares, as well as all requests for the redemption of Creation Units, received by each Fund (or an authorized broker or agent, or its authorized designee) before the close of trading on the Exchange on that day.

Generally, each Fund's portfolio securities, including securities issued by ETFs, are valued each day at the last quoted sales price on each security's primary exchange. Securities traded or dealt in upon one or more securities exchanges (whether domestic or foreign) for which market quotations are readily available and not subject to restrictions against resale shall be valued at the last quoted sales price on the primary exchange or, in the absence of a sale on the primary exchange, at the mean between the current bid and ask prices on such exchange. Securities primarily traded in the National Association of Securities Dealers' Automated Quotation System ("NASDAQ") National Market System for which market quotations are readily available shall be valued using the NASDAQ Official Closing Price. Securities that are not traded on any securities exchange (whether domestic or foreign) and for which over-the-counter market quotations are readily available generally shall be valued at the last sale price or, in the absence of a sale, at the mean between the current bid and ask price on such over-the-counter market. Debt securities not traded on an exchange may be valued at prices supplied by a pricing agent(s) based on broker or dealer supplied valuations or matrix pricing, a method of valuing securities by reference to the value of other securities with similar characteristics, such as rating, interest rate and maturity.

If market quotations are not readily available, securities will be valued at their fair market value as determined using the "fair value" procedures approved by the Board and the Adviser. The Board has selected the Adviser as its valuation designee. Fair value pricing involves subjective judgments and it is possible that the fair value determined for a security may be materially different than the value that could be realized upon the sale of that security. The fair value prices can differ from market prices when they become available or when a price becomes available. The Board reviews the execution of this process at least annually to ensure the process produces reliable results. Independent pricing services may assist in calculating the value of each Fund's portfolio securities. In addition, market prices for foreign securities are not determined at the same time of day as the NAV for each Fund.

In computing the NAV, the Funds value foreign securities held by a Fund at the latest closing price on the exchange in which they are traded immediately prior to closing of the Exchange. Prices of foreign securities quoted in foreign currencies are translated into U.S. dollars at current rates. If events materially affecting the value of a security in a Fund's portfolio, particularly foreign securities, occur after the close of trading on a foreign market but before a Fund prices its shares, the security will be valued at fair value. For example, if trading in a portfolio security is halted and does not resume before a Fund calculates its NAV, the Adviser may need to price the security using the Funds' fair value pricing guidelines. Without a fair value price, short-term traders could take advantage of the arbitrage opportunity and dilute the NAV of long-term investors. Fair valuation of a Fund's portfolio securities can serve to reduce arbitrage opportunities available to short-term traders, but there is no assurance that fair value pricing policies will prevent dilution of a Fund's NAV by short term traders. The determination of fair value involves subjective judgments. As a result, using fair value to price a security may result in a price materially different from the prices used by other mutual funds to determine NAV, or from the price that may be realized upon the actual sale of the security.

HOW TO BUY AND SELL SHARES

Shares of the Funds are listed for trading on the respective Exchanges, as stated below. Share prices are reported in dollars and cents per Share. Shares can be bought and sold on the secondary market throughout the trading day like other publicly traded shares, and Shares typically trade in blocks of less than a Creation Unit. There is no minimum investment required. Shares may only be purchased and sold on the secondary market when the Exchange is open for trading. The Exchange is open for trading Monday through Friday and is closed on weekends and the following holidays, as observed: New Year's Day, Martin Luther King, Jr. Day, Presidents' Day, Good Friday, Memorial Day, Juneteenth Day, Independence Day, Labor Day, Thanksgiving Day and Christmas Day.

When buying or selling Shares through a broker, you will incur customary brokerage commissions and charges, and you may pay some or all of the spread between the bid and the offered price in the secondary market on each leg of a round trip (purchase and sale) transaction.

Authorized Participants that have entered into a contract with the Funds' distributor may acquire Shares from the Funds, and Authorized Participants may tender their Shares for redemption directly to the Funds, at NAV per Share only in large blocks, or Creation Units, of 25,000 Shares. Purchases and redemptions directly with the Funds must follow each Fund's procedures, which are described in the SAI. The Funds expect that purchases and redemptions of Creation Units will be made primarily through in-kind delivery of portfolio securities. A Fund may liquidate and terminate at any time without shareholder approval.

Share Trading Prices

The approximate value of Shares, an amount representing on a per share basis the sum of the current market price of the securities accepted by the Funds in exchange for Shares and an estimated cash component, will be disseminated every 15 seconds throughout the trading day through the facilities of the Consolidated Tape Association. This approximate value should not be viewed as a "real-time" update of the NAV per Share because the approximate value may not be calculated in the same manner as the NAV, which is computed once a day, generally at the end of the business day. The Funds are not involved in, or responsible for, the calculation or dissemination of the approximate value of the Shares, and the Funds do not make any warranty as to the accuracy of these values.

Book Entry

Shares are held in book entry form, which means that no stock certificates are issued. The Depository Trust Company ("DTC") or its nominee is the record owner of all outstanding Shares and is recognized as the owner of all Shares for all purposes.

Investors owning Shares are beneficial owners as shown on the records of DTC or its participants. DTC serves as the securities depository for all Shares. Participants in DTC include securities brokers and dealers, banks, trust companies, clearing corporations and other institutions that directly or indirectly maintain a custodial relationship with DTC. As a beneficial owner of Shares, you are not entitled to receive physical delivery of stock certificates or to have Shares registered in your name, and you are not considered a registered owner of Shares. Therefore, to exercise any right as an owner of Shares, you must rely upon the procedures of DTC and its participants. These procedures are the same as those that apply to any other securities that you hold in book entry or "street name" form.

FREQUENT PURCHASES AND REDEMPTIONS OF FUND SHARES

Shares can only be purchased and redeemed directly from the Funds in Creation Units by Authorized Participants that have entered into a contract with the Funds' distributor. The vast majority of trading in Shares occurs on the secondary market. Because the secondary market trades do not directly involve the Fund, it is unlikely those trades would cause the harmful effects of market timing, including dilution, disruption of portfolio management, increases in the Funds' trading costs and the realization of capital gains. With regard to the purchase or redemption of Creation Units directly with the Funds, to the extent effected in-kind (*i.e.*, for securities), those trades do not cause the harmful effects that may result from frequent cash trades. To the extent trades are effected in whole or in part in cash, those trades could result in dilution to the Funds and increased transaction costs, which could negatively impact a Fund's ability to achieve its investment objective. However, direct trading by Authorized Participants is critical to ensuring that Shares trade at or close to NAV. The Funds also employ fair valuation pricing to minimize potential dilution from market timing. In addition, the Funds impose transaction fees on purchases and redemptions of Shares to cover the custodial and other costs incurred by the Funds in effecting trades. These fees increase if an investor substitutes cash in part or in whole for securities, reflecting the fact that a Fund's trading costs increase in those circumstances. Given this structure, the Trust has determined that it is not necessary to adopt policies and procedures to detect and deter market timing of the Shares.

DISTRIBUTION AND SERVICE PLAN

The Funds have adopted a distribution and service plan ("Plan") pursuant to Rule 12b-1 under the 1940 Act. Under the Plan, the Funds are authorized to pay distribution fees to the distributor and other firms that provide distribution and shareholder services ("Service Providers"). If a Service Provider provides these services, the Fund may pay fees at an annual rate not to exceed 0.25% of average daily net assets, pursuant to Rule 12b-1 under the 1940 Act.

No distribution or service fees are currently paid by the Funds and will not be paid by the Funds unless authorized by the Trust's Board. There are no current plans to impose these fees. In the event Rule 12b-1 fees were charged, over time they would increase the cost of an investment in the Funds.

DIVIDENDS, OTHER DISTRIBUTIONS AND TAXES

Shares are traded throughout the day in the secondary market on a national securities exchange on an intra-day basis and are created and redeemed in-kind and/or for cash in Creation Units at each day's next calculated NAV. In-kind arrangements are designed to protect ongoing shareholders from the adverse effects on a Fund's portfolio that could arise from frequent cash redemption transactions. In a conventional mutual fund, redemptions can have an adverse tax impact on taxable shareholders if the mutual fund needs to sell portfolio securities to obtain cash to meet net fund redemptions. These sales may generate taxable gains for the ongoing shareholders of the mutual fund, whereas the Shares' in-kind redemption mechanism generally will not lead to a tax event for the Funds or its ongoing shareholders.

Ordinarily, dividends from net investment income, if any, are declared and paid quarterly by the US Equity PLUS Bitcoin Strategy ETF, and dividends from net investment income, if any, are declared and paid monthly for the Bitcoin Strategy PLUS Income ETF. The Funds distribute their net realized capital gains, if any, to shareholders annually. The Funds may also pay a special distribution at the end of a calendar year to comply with federal tax requirements.

No dividend reinvestment service is provided by the Funds. Broker-dealers may make available the DTC book-entry Dividend Reinvestment Service for use by beneficial owners of the Funds for reinvestment of their dividend distributions. Beneficial owners should contact their broker to determine the availability and costs of the service and the details of participation therein. Brokers may require beneficial owners to adhere to specific procedures and timetables. If this service is available and used, dividend distributions of both income and realized gains will be automatically reinvested in additional whole shares of the Funds purchased in the secondary market.

Distributions in cash may be reinvested automatically in additional whole Shares only if the broker through whom you purchased Shares makes such option available.

Taxes

As with any investment, you should consider how your investment in Shares will be taxed. The tax information in this Prospectus is provided as general information. You should consult your own tax professional about the tax consequences of an investment in Shares.

Unless your investment in Shares is made through a tax-exempt entity or tax-deferred retirement account, such as an individual retirement account, you need to be aware of the possible tax consequences when:

- A Fund makes distributions,
- You sell your Shares listed on the Exchange, and
- You purchase or redeem Creation Units.

Taxes on Distributions

Distributions from each Fund's net investment income, including net short-term capital gains, if any, are taxable to you as ordinary income, except that each Fund's dividends attributable to its "qualified dividend income" (*i.e.*, dividends received on stock of most domestic and certain foreign corporations with respect to which the Fund satisfies certain holding period and other restrictions), if any, generally are subject to federal income tax for non-corporate shareholders who satisfy those restrictions with respect to their Shares at the rate for net capital gain. A part of each Fund's dividends also may be eligible for the dividends-received deduction allowed to corporations -- the eligible portion may not exceed the aggregate dividends each Fund receives from domestic corporations subject to federal income tax (excluding Real Estate Investment Trusts) and excludes dividends from foreign corporations -- subject to similar restrictions. However, dividends a corporate shareholder deducts pursuant to that deduction are subject indirectly to the federal alternative minimum tax.

In general, your distributions are subject to federal income tax when they are paid, whether you take them in cash or reinvest them in the Funds (if that option is available). Distributions reinvested in additional Shares through the means of a dividend reinvestment service, if available, will be taxable to shareholders acquiring the additional Shares to the same extent as if such distributions had been received in cash. Distributions of net long-term capital gains, if any, in excess of net short-term capital losses are taxable as long-term capital gains, regardless of how long you have held the Shares.

Distributions in excess of a Fund's current and accumulated earnings and profits are treated as a tax-free return of capital to the extent of your basis in the Shares and as capital gain thereafter. A distribution will reduce a Fund's NAV per Share and may be taxable to you as ordinary income or capital gain (as described above) even though, from an investment standpoint, the distribution may constitute a return of capital.

By law, the Funds are required to withhold 28% of your distributions and redemption proceeds if you have not provided the Fund with a correct Social Security number or other taxpayer identification number and in certain other situations.

Taxes on Exchange-Listed Share Sales

Any capital gain or loss realized upon a sale of Shares is generally treated as long-term capital gain or loss if the Shares have been held for more than one year and as short-term capital gain or loss if the Shares have been held for one year or less. The ability to deduct capital losses from sales of Shares may be limited.

Taxes on Purchase and Redemption of Creation Units

An Authorized Participant who exchanges securities for Creation Units generally will recognize a gain or a loss equal to the difference between the market value of the Creation Units at the time of the exchange and the sum of the exchanger's aggregate basis in the securities surrendered plus any Cash Component it pays. An AP who exchanges Creation Units for securities will generally recognize a gain or loss equal to the difference between the exchanger's basis in the Creation Units and the sum of the aggregate market value of the securities received plus any cash equal to the difference between the NAV of the Shares being redeemed and the value of the securities. The Internal Revenue Service ("Service"), however, may assert that a loss realized upon an exchange of securities for Creation Units cannot be deducted currently under the rules governing "wash sales" or for other reasons. Persons exchanging securities should consult their own tax advisor with respect to whether wash sale rules apply and when a loss might be deductible.

Any capital gain or loss realized upon redemption of Creation Units is generally treated as long-term capital gain or loss if the Shares have been held for more than one year and as short-term capital gain or loss if the Shares have been held for one year or less.

If you purchase or redeem Creation Units, you will be sent a confirmation statement showing how many Shares you purchased or sold and at what price. See "Tax Status" in the SAI for a description of the newly effective requirement regarding basis determination methods applicable to Share redemptions and each Fund's obligation to report basis information to the Service.

The foregoing discussion summarizes some of the possible consequences under current federal tax law of an investment in the Funds. It is not a substitute for personal tax advice. Consult your personal tax advisor about the potential tax consequences of an investment in the Shares under all applicable tax laws. See "Tax Status" in the SAI for more information.

FUND SERVICE PROVIDERS

Bank of New York Mellon is the Funds' administrator, transfer agent, custodian and fund accountant. It has its principal office at 240 Greenwich St., New York, NY 10286, and is primarily in the business of providing administrative, fund accounting and transfer agent services to retail and institutional mutual funds.

Forside Financial Services, LLC (the "Distributor"), located at Three Canal Plaza, Suite 100, Portland, ME 04101, is the distributor for the shares of the Funds. The Distributor is a registered broker-dealer and member of the Financial Industry Regulatory Authority, Inc. ("FINRA").

Thompson Hine LLP, 41 South High Street, 17th Floor, Columbus, Ohio 43215, serves as legal counsel to the Trust.

Cohen & Company, Ltd., located at 1350 Euclid Ave., Suite 800, Cleveland, OH 44115, serves as the Funds' independent registered public accounting firm. The independent registered public accounting firm is responsible for auditing the annual financial statements of the Funds.

OTHER INFORMATION

Continuous Offering

The method by which Creation Units of Shares are created and traded may raise certain issues under applicable securities laws. Because new Creation Units of Shares are issued and sold by the Funds on an ongoing basis, a "distribution," as such term is used in the Securities Act of 1933, as amended (the "Securities Act"), may occur at any point. Broker-dealers and other persons are cautioned that some activities on their part may, depending on the circumstances, result in their being deemed participants in a distribution in a manner which could render them statutory underwriters and subject them to the prospectus delivery requirement and liability provisions of the Securities Act.

For example, a broker-dealer firm or its client may be deemed a statutory underwriter if it takes Creation Units after placing an order with the Distributor, breaks them down into constituent Shares and sells the Shares directly to customers or if it chooses to couple the creation of a supply of new Shares with an active selling effort involving solicitation of secondary market demand for Shares. A determination of whether one is an underwriter for purposes of the Securities Act must take into account all the facts and circumstances pertaining to the activities of the broker-dealer or its client in the particular case, and the examples mentioned above should not be considered a complete description of all the activities that could lead to a characterization as an underwriter.

Broker dealers who are not “underwriters” but are participating in a distribution (as contrasted to ordinary secondary trading transactions), and thus dealing with Shares that are part of an “unsold allotment” within the meaning of Section 4(3)(C) of the Securities Act, would be unable to take advantage of the prospectus delivery exemption provided by Section 4(3) of the Securities Act. This is because the prospectus delivery exemption in Section 4(3) of the Securities Act is not available in respect of such transactions as a result of Section 24(d) of the 1940 Act. As a result, broker dealer firms should note that dealers who are not underwriters but are participating in a distribution (as contrasted with ordinary secondary market transactions) and thus dealing with Shares that are part of an overallotment within the meaning of Section 4(3)(A) of the Securities Act would be unable to take advantage of the prospectus delivery exemption provided by Section 4(3) of the Securities Act. Firms that incur a prospectus delivery obligation with respect to Shares are reminded that, under Rule 153 of the Securities Act, a prospectus delivery obligation under Section 5(b)(2) of the Securities Act owed to an exchange member in connection with a sale on the Exchange is satisfied by the fact that the prospectus is available at the Exchange upon request. The prospectus delivery mechanism provided in Rule 153 is only available with respect to transactions on an exchange.

Dealers effecting transactions in the Shares, whether or not participating in this distribution, are generally required to deliver a Prospectus. This is in addition to any obligation of dealers to deliver a Prospectus when acting as underwriters.

Householding: To reduce expenses, you may elect to have the Fund mail only one copy of the prospectus and each annual and semi-annual report to those addresses shared by two or more accounts. If you wish to receive individual copies of these documents, please contact your financial institution.

Certain Conditions on Certain Shareholder Legal Actions

Pursuant to the Trust’s primary governing document, the Agreement and Declaration of Trust, shareholders wishing to pursue a derivative action (a suit brought by a shareholder on behalf of a fund) are subject to various conditions including: (i) Trustees must have a reasonable amount of time to assess a request for action, (ii) at least 10% of shareholders must participate in the action, (iii) expenses of a failed action are borne by the complaining shareholders. However, these provisions do not apply to actions brought under federal securities laws. In addition, all shareholder legal complaints must be brought in courts of the State of Delaware sitting in Kent County and the United States District Court for the District of Delaware, which may be inconvenient for some shareholders.

FINANCIAL HIGHLIGHTS

The following financial highlights are intended to help you understand the financial history of a Fund since inception of the life of the Fund. Certain information reflects financial results for a single Fund Share. The total returns in this table represent the rate that an investor would have earned (or lost) on an investment in the Fund (assuming reinvestment of all dividends and distributions). The information for various periods ended June 30 has been audited by Cohen & Company, Ltd., the Funds' Independent Registered Public Accounting Firm, whose reports, along with each Fund's financial statements, are included in the June 30, 2024 Annual Report of the Trust, which is available free of charge, upon request.

Consolidated Financial Highlights
